Ely, Nevada 89301

Site Number: 9941
STATE OF NEVADA PUBLIC WORKS DIVISION
FACILITY CONDITION ANALYSIS

Report Printed in February 2016
The Facility Condition Analysis Program was created under the authority found in NRS 341.128. The State Public Works Division develops this report using cost estimates based on contractor pricing which includes materials, labor, location factors and profit and overhead. The costs of project design, management, special testing and inspections, inflation and permitting fees are not included. Cost estimates are derived from the R.S. Means Cost Estimating Guide and from comparable construction costs of projects completed by SPWD project managers.

The deficiencies outlined in this report were noted from a visual survey. This report does not address routine maintenance needs. Recommended projects do not include telecommunications, furniture, window treatments, space change, program issues, or costs that could not be identified or determined from the survey and available building information. If there are buildings without projects listed, this indicates that only routine maintenance needs were found. This report considers probable facility needs for a 10 year planning cycle.

This report is not a guarantee of funding and should not be used for budgeting purposes. This report is a planning level document for agencies and State Public Works Division to assess the needs of the Building and/or Site and to help support future requests for ADA upgrades / renovations, Capital Improvement Projects and maintenance. The final scope and estimate of any budget request should be developed by a qualified individual. Actual project costs will vary from those proposed in this report when the final scope and budget are developed.

Establishing a Facility Condition Needs Index (FCNI) for each building

The FCA reports identify maintenance items and establish construction cost estimates. These costs are summarized at the end of the report and noted as construction costs per square foot. A FCNI is commonly used by facility managers to make a judgment whether to recommend whole replacement of facilities, rather than expending resources on major repairs and improvements. The FCNI is a ratio between the proposed facility upgrade costs and facility replacement costs (FRC). Those buildings with indices greater than .50 or 50% are recommended to be considered for complete replacement.

Class Definitions

**PRIORITY CLASS 1 - Currently Critical (Immediate to Two Years)**

Projects in this category require immediate action to return a facility to normal operation, stop accelerated deterioration, correct a fire/life safety hazard, or correct an ADA requirement.

**PRIORITY CLASS 2 - Necessary - Not Yet Critical (Two to Four Years)**

Projects in this category include conditions requiring appropriate attention to preclude predictable deterioration or potential downtime and the associated damage or higher costs if deferred further.

**PRIORITY CLASS 3 - (Four to Ten Years)**

Projects in this category include items that represent a sensible improvement to existing conditions. These items are not required for the most basic function of a facility; however, Priority 3 projects will either improve overall usability and/or reduce long-term maintenance.

ELY STATE PRISON SITE
BUILDING REPORT

Ely State Prison is located on a 23 acre site several miles outside Ely on State Route 490. It is a maximum security prison housing approximately 1,100 inmates, including prisoners on death row. The site has twenty buildings and includes: eight inmate housing units; a scheduled services/administration building; a work and recreation facility; a central plant building with warehouse and vehicle services; a trustee dormitory; main gate house; an armory building; sewage grinder building; equipment storage building; and four guard towers. This prison was built in two phases; the towers, prison support buildings and Housing units 1-4 were built first. Housing units 5-8 were built approximately 2 years later.

PRIORITY CLASS 1 PROJECTS

Currently Critical

Total Construction Cost for Priority 1 Projects: $150,000

SIDEWALK REPLACEMENT

The sidewalks serving the entrances of Housing Units 5-8 are deteriorated and failing. In some areas cracks wider than four inches have been identified, and there is settling, spalling and ravelling in many locations. This project addresses removal and replacement of existing sidewalks as needed. 5,000 SF of 4” thick concrete sidewalk was used for this estimate.

Construction Cost $50,000

SITE DRAINAGE AT MANHOLES

The Ely State Prison site has several manholes with 4160V equipment installed below grade and the drainage doesn't prevent water accumulations. Due to their location, staff are required to manually inspect and, when needed, lower sump pumps into the hole to drain the excess water. This creates a potential electrocution hazard. This project provides funding to install catch basins, French drains and additional drain piping as needed to carry the water away from the manholes. This project or a portion thereof was previously recommended in the FCA report dated 06/04/2002 and 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

Construction Cost $100,000

PRIORITY CLASS 2 PROJECTS

Necessary - Not Yet Critical

Total Construction Cost for Priority 2 Projects: $4,223,544

ASPHALT CONCRETE REPLACEMENT

The asphalt on the south side of the Warehouse near the fuel pumps is failing, with significant alligatoring, settling and cracks observed. The area sees high traffic volume and is used by heavy equipment which has contributed to the deterioration. This project covers the removal and replacement of the existing asphalt for the area. 4,000 square feet was used to generate this estimate.

Construction Cost $40,000

CONCRETE SIDEWALK REPAIRS

The concrete sidewalks are in generally good condition, but there are several areas that require attention. Deterioration, spalling and cracking has occurred, mainly from exposure to the weather. In some areas the sidewalks have lost their texture and cause a slipping hazard. This project would provide for the removal and replacement of the damaged concrete sidewalks. 10,000 SF of 4” thick concrete sidewalk was used for this estimate.

This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.
## CRACK FILL & SEAL ASPHALT PAVING

It is important to maintain the asphalt concrete paving and concrete drainage swales on the site. This project would provide for replacing the swales and crack filling and sealing of the paving site wide including access roads, parking areas, the perimeter road and maintenance yard. Striping is included in this estimate. This project should be scheduled on a 5 year cyclical basis to maintain the integrity of the paving and prevent premature failure. 174,240 square feet of asphalt area was used to generate this estimate.

**Project Index #: 9941SIT6**  
Construction Cost $104,544

---

## EXHAUST FAN REPLACEMENTS

The existing exhaust fans that serve the buildings are original equipment and are not providing adequate ventilation. There are 4 large kitchen hoods and 17 smaller exhaust fans on the housing units that should be scheduled for replacement. This project would provide for the removal of the existing exhaust fan assemblies and the purchase and installation of new exhaust fan assemblies including connections to utilities.

**Project Index #: 9941HVA5**  
Construction Cost $25,000

---

## EXTERIOR SOLAR SITE LIGHTING UPGRADE

There are approximately 20 existing light poles around the site not including the high mast lighting within the secured area. These older light fixtures are not energy efficient and several of the concrete bases are severely deteriorated. This project would provide for the installation of 20 solar powered LED exterior light fixtures, 20 foot tall poles and 30” diameter raised concrete bases. This installation will eliminate the need for trenching and electrical connections. Some of the existing poles and bases may be acceptable to re-use. If so, the estimate can be reduced accordingly.

**Project Index #: 9941SIT8**  
Construction Cost $130,000

---

## FENCE FOOTING REPAIR

The concrete footing for the perimeter security fencing has many areas that are in need of repair. The concrete is cracking and deteriorating and could eventually compromise the structural integrity of the fencing. This project would provide for repair or replacement of damaged sections of concrete as needed.

**Project Index #: 9941SIT11**  
Construction Cost $60,000

---

## GATE OPERATOR REPLACEMENTS

There is an automatic gate operator in the yard between the Administrative building and the Housing units and two at the Sally Port. The gate operators are malfunctioning, have been problematic, and have difficulty opening and closing the gates. This project recommends replacing the three gate operators with high quality operators that can handle heavy traffic as well as servicing the gates and related hardware to ensure prolonged operation. The gate operators will be required to meet UL Standard 325, per NRS 405.270.

**Project Index #: 9941SIT7**  
Construction Cost $30,000

---

## HVAC AIR HANDLER REPLACEMENT - PHASE 2

The HVAC roof top air handling units are over 20 years old. There are 24 units throughout the site, of which this phase covers the remaining 12 units. They are not energy efficient, need constant repairs and have reached the end of their expected and useful life. This project would provide for the installation of twelve new HVAC packaged units and cleaning of the existing duct work. This project includes removal and disposal of the existing HVAC units and all required connections to utilities. This project is in design under CIP 15-M01 and construction is scheduled to begin on 07/11/2016.  
This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

**Project Index #: 9941HVA3**  
Construction Cost $3,500,000

---

## IRRIGATION SYSTEM ADJUSTMENTS

The existing irrigation system is spraying water on the side of the buildings inside the secured area, especially during windy conditions. There is noticeable damage to the exterior walls which can lead to extreme damage and possible mold growth if not addressed soon. This project would provide for the relocation of the sprinklers away from the buildings.  
This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

**Project Index #: 9941SIT3**  
Construction Cost $10,000
PLUMBING VALVE REPLACEMENTS

The majority of the plumbing isolation valves on the site are gate valves original to the building. Many of these valves no longer completely stop water when closed. This project will provide funding to replace the faulty gate valves with ball valves. 18 valves was used for this estimate. This project or a portion thereof was previously recommended in the FCA report dated 06/04/2002 and 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

Project Index #: 9941PLM1
Construction Cost $18,000

ROOFTOP PACKAGED UNIT REPLACEMENT

There are 13 small HVAC roof top units on the buildings that were not addressed by the recent HVAC Replacement projects. These units were installed in 1989. They are not energy efficient and have reached the end of their expected and useful life. This project would provide for installation of 13 new HVAC packaged units and cleaning of the existing duct work and grilles. This project includes removal and disposal of the existing HVAC units and all required connections to utilities.

Project Index #: 9941HVA4
Construction Cost $156,000

STENTOFON SWITCH REPLACEMENT

At the time of the survey the staff reported that the Stentofon communications system was not operating properly. This project provides funding to replace the Stentofon communications switch that has failed and is causing problems with the system. This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

Project Index #: 9941SEC3
Construction Cost $50,000

WATER TANK BUILDING REPORT

The Water Tank is located on the east side of the site. The tank has a 500,000 gallon capacity and is 62' in diameter and 24' tall.

PRIORITIZED PROJECTS

Total Construction Cost for Priority 2 Projects: $14,880

Priority Class 2: Necessary - Not Yet Critical Two to Four Years

Project Index #: 2729EXT1
Construction Cost $14,880

EXTERIOR FINISHES

It is important to maintain the finish, weather resistance and appearance of the water tank. This project would provide for the painting of the water tank to maintain it in a good, weather tight condition. It is recommended that this project be implemented in the next 2-3 years and that it be scheduled on a cyclical basis based on environmental conditions. This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

<td>EXTERIOR FINISHES</td>
<td>It is important to maintain the finish, weather resistance and appearance of the building. This project recommends work to protect the exterior building envelope, other than the roof, including painting, staining, or other applied finishes, replacing missing screw attachments, and caulking around windows, flashing, fixtures, and other penetrations to maintain the building in good, weather tight condition. It is recommended that this project be implemented in the next 2-3 years and that it be scheduled on a cyclical basis based on environmental conditions. This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.</td>
<td>2242EXT1</td>
<td>$2,000</td>
</tr>
<tr>
<td>FASCIA REPLACEMENT</td>
<td>The wood fascia around the eaves of the roof is worn and weathered. This project would provide for removal and disposal of the existing wood fascia and replacement with a new primed and painted wood fascia board. This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.</td>
<td>2242EXT2</td>
<td>$2,000</td>
</tr>
<tr>
<td>HVAC SYSTEM REPAIRS</td>
<td>Generally, the air handlers appear to have ten years remaining life, with the exception of the unit on the roof of the Green Room and the York heat pumps in the same area. Long range plans should include elimination of the heat pumps and installation of a larger, multi-zone system on the roof of the Green Room. (Note: it appears that one of the coils of the existing air handler was recently replaced.) The main air handlers in the basement fan room have life remaining, but need repairs. Typical repair needs include replacement of leaking control valves/seals, repair of leaking piping connections and dielectric unions, repair of damaged or deteriorated pipe insulation, repair of access door hinges/latches, minor sheet metal repair, replacement of a standard efficiency motor with a high efficiency unit, and controls repairs (including gauge replacements, etc.).</td>
<td>2242HVA1</td>
<td>$130,780</td>
</tr>
</tbody>
</table>

Total Construction Cost for Priority 2 Projects: $139,280
The interior finishes are in fair condition. It is recommended to paint the interior walls and ceilings at least once in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability. This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

WINDOW REPLACEMENT
The windows in the guard tower are original to the building. They are foggy and difficult to see through. Many of the seals are broken and dust and wind comes through. Due to the security issues of seeing clearly out of the tower, this project recommends replacing the windows. Removal and disposal of the existing windows is included in this estimate.

This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

Construction Cost $5,800
RESTROOM FIXTURE REPLACEMENT

The restroom fixtures in the Tower are worn and damaged from many years of use including the water closet, lavatory and faucet. Many fixtures are or have been leaking and have caused extensive scaling and staining to the fixtures themselves. It is recommended that all fixtures be replaced with new units. This project includes removal and disposal of the existing fixtures and installation of new fixtures.

WATER HEATER REPLACEMENT

There is a 7 gallon electric water heater in the building. The average life span of a water heater is eight to ten years. With the passage of time and constant use, this unit is showing signs of wear and should be scheduled for replacement in the next 2-3 years. It is recommended that a new on-demand electric water heater be installed. Removal and disposal of the existing equipment is included in this estimate.

PRIORITY CLASS 3 PROJECTS

Long-Term Needs

Total Construction Cost for Priority 3 Projects: $3,480

Four to Ten Years

ROOF REPLACEMENT

The roof on this building was in fair condition at the time of the survey. The statewide roofing program has set the useful life of an average roof at 15 years. The roof warranty expires at the end of the same time frame. The temperature fluctuations throughout the year, consistent wind which blows sand and dirt on to the roof membrane, and constant exposure to the sun are contributing factors to wear and deterioration. The current roofing system was installed in 2006. It is recommended that this building be re-roofed in the next 4-5 years to be consistent with the roofing program and the end of the warranty period.

BUILDING #14 - GATEHOUSE

BUILDING REPORT

Building #14 - Gatehouse is a concrete masonry unit (CMU) and steel framed structure with a single-ply roofing system on a concrete foundation. This is the main entrance to the prison. It contains the visitation check-in counter, waiting area, and ADA accessible restrooms.

PRIORITY CLASS 1 PROJECTS

Currently Critical

ADA ACCESSIBLE COUNTER

The Americans with Disabilities Act (ADA) provides for accessibility to sites and services for people with physical limitations. The Security desk in the Gatehouse has a counter for the employees and public to approach which does not meet current requirements. Section 904.4 of the ADA Standards For Accessible Design states that a portion of the counter surface that is 36” long minimum and 36” high maximum above the finish floor shall be provided. This project will provide an accessible counter space in accordance with this requirement. The 2012 IBC, ICC/ANSI A117.1 - 2009, NRS 338.180 and the most current version of the ADA Standards For Accessible Design were used as a reference for this project.

The interior finishes are in fair condition. It is recommended to paint the interior walls and ceilings at least once in the next 2-3 years, and that it be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability.

This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

Total Construction Cost for Priority 2 Projects: $6,750

Project Index #: 1428INT1

Construction Cost: $6,750

JANITORS CLOSET REPAIRS

The mop sink in the Janitors Closet is mounted adjacent to painted plywood and is showing signs of water damage. This project would provide fiberglass reinforced panels (FRP) to be installed on the walls adjacent to the mop sink. The FRP shall extend two feet beyond the edge of the sink and a minimum of 54” above the floor finish.

Total Construction Cost: $1,400

Project Index #: 1428INT2

Construction Cost: $1,400
NONABSORBENT FINISHES

2012 IBC Section 1210 requires the installation of smooth, hard, nonabsorbent surfaces in the following restroom areas:
on floors in toilet and bathing rooms that extends upward onto the walls at least 6 inches, within 2 feet of the sides ofurinals and water closets to a height of 4 feet above the floor and in shower compartments to a height not less than 70
inches above the drain inlet. There are several areas of painted gypsum board near fixtures in the restrooms that do not
meet these requirements. This project recommends adding tile to the non-compliant areas to comply with this code
section.

This project or a portion thereof was previously recommended in the FCA report dated 06/04/2002 and 09/18/2007. It
has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

WATER HEATER REPLACEMENT

There is a 30 gallon electric water heater in the building. The average life span of a water heater is eight to ten years.
With the passage of time and constant use, this unit is showing signs of wear and should be scheduled for replacement in
the next 2-3 years. It is recommended that a new gas-fired water heater be installed for more efficient use of energy. This
estimate includes: 100 feet of gas pipe, fittings, couplers, and labor for installation. Removal and disposal of the existing
equipment is included in this estimate.

PRIORITY CLASS 3 PROJECTS

Four to Ten Years

Total Construction Cost for Priority 3 Projects: $16,200

ROOF REPLACEMENT

The roof on this building was in fair condition at the time of the survey. The statewide roofing program has set the useful
life of an average roof at 15 years. The roof warranty expires at the end of the same time frame. The temperature
fluctuations throughout the year, consistent wind which blows sand and dirt on to the roof membrane, and constant
exposure to the sun are contributing factors to wear and deterioration. The current roofing system was installed in 2006.
It is recommended that this building be re-roofed in the next 4-5 years to be consistent with the roofing program and the
end of the warranty period.

08-Feb-16  Page 19 of 51
Building #13 - Trustee Dormitory is a concrete masonry unit (CMU) and steel framed structure with a single-ply roofing system on a concrete foundation. This building houses the trustee inmates and cells, a large common area, restrooms and an asphalt recreation yard. The showers have seen use/abuse, tile is missing and damaged and are in need of remodeling. There is one restroom that is somewhat ADA accessible.

**RESTROOM REMODEL**

The restroom is original to the building and in overall poor condition. The finishes, fixtures, cabinets, toilets, showers and exhaust fans are showing signs of wear and deterioration. The ceramic tile in the showers is failing and many tiles have fallen off exposing the wood framing to water. This project would provide for a complete remodel of the restroom including complying with the 2012 IBC, ICC/ANSI A117.1 - 2009, NRS 338.180 and the most current version of the ADA Standards For Accessible Design. The removal and disposal of the existing fixtures and finishes is included in this estimate.

- **Project Index #:** 1426ADA1
- **Construction Cost:** $45,000

**TDD INSTALLATION**

There is telephone in the building for inmates that is not equipped with a telecommunications device for the deaf (TDD). In order to comply with ADA requirements it is recommended to install a TDD system in the non-contact visitation area. The 2012 IBC, ICC/ANSI A117.1 - 2009, NRS 338.180 and the most current version of the ADA Standards For Accessible Design were used as a reference for this project.

- **Project Index #:** 1426ADA2
- **Construction Cost:** $20,000

**BREAK ROOM REMODEL**

The kitchenette and associated cabinets in the break room are original to the building. The quality of construction and installation were inadequate for the high usage at this facility, and the cabinets and counter tops are delaminating and failing. This project recommends the replacement of the existing kitchen counters, cabinets, and associated equipment with heavy duty, quality components. The cabinets should be finished inside and outside with a melamine or similar finish which encapsulates the door, frame, and shelving. The countertops should be constructed of a highly durable product, such as stainless steel, over a moisture resistant underlayment to minimize swelling and damage from water exposure. This estimate includes disposal of the existing materials.

- **Project Index #:** 1426INT2
- **Construction Cost:** $20,000

**EXTERIOR FINISHES**

It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building excluding the roof. Included in the cost is sealing and painting the concrete masonry unit walls and caulking of the windows, flashing, fixtures and all other penetrations. It is recommended that the building be sealed, painted and caulked in the next 2-3 years, and that it be scheduled on a cyclical basis to maintain the integrity of the structure. This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.
INTERIOR FINISHES

The interior finishes are in fair condition. It is recommended to paint the interior walls and ceilings at least once in the next 2-3 years, and that it be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability. This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. Building #11 - Warehouse/ Central Plant is a concrete masonry unit (CMU) and steel framed structure with a single-ply roofing system on a concrete foundation. The building contains the warehouse, central plant and vehicle maintenance shop. It also has cold storage units and freezers with a dedicated loading dock and high piled storage racks. There are also restrooms in the building which are not ADA accessible.

PRIORITY CLASS 1 PROJECTS

Total Construction Cost for Priority 1 Projects: $110,000

Currently Critical

ADA RESTROOM REMODELS

The existing Staff and Inmate restrooms in the building do not meet the Americans with Disabilities Act (ADA) requirements. A complete retrofit is necessary. This project would provide funding for remodeling two restrooms into ADA compliant restrooms. These items may include a new sink, toilet, hardware, mirrors, fixtures, flooring and paint. The 2012 IBC, ICC/ANSI A117.1 - 2009, NRS 338.180 and the most current version of the ADA Standards For Accessible Design were used as a reference for this project.

Project Index #: 1425ADA1
Construction Cost $30,000

BOILER BURNER REPLACEMENTS

The three boilers are original to the building. The burner assemblies have become problematic and parts are hard to come by. They are reaching the end of their expected lifetime. This project provides for the removal and disposal of the existing burners and installation of new burner assemblies on all three boilers.
This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

Project Index #: 1425HVA2
Construction Cost $75,000

EXIT SIGN UPGRADE

The existing exit signs in this building are older types and should be replaced with new self-illuminated or LED style signs with battery-backed internal systems. IBC - 2012 Chapter 10 was referenced for this project.
This project or a portion thereof was previously recommended in the FCA report dated 06/04/2002 and 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

Project Index #: 1425SFT1
Construction Cost $5,000

The Kewanee steam boiler servicing the building was installed almost 30 years ago and should be scheduled for replacement. The life expectancy of this unit is 20 to 25 years with proper maintenance and water treatment programs. Replacement parts for performing routine and emergency maintenance are hard to find for this older equipment. The controls and mixing valves should be replaced for the same reasons. This project would provide for the removal and disposal of the existing boiler, controls and mixing valves and replacement with new equipment including all required connections to utilities and equipment. The estimate is based on a 150 PSI steam boiler, associated equipment and new equipment to replace the electric heaters. The existing chemical water treatment system will need to be tested and adjusted once equipment is operational. $2,000 is included in this estimate for testing of the chemical water treatment system.

Four of the commercial tumbler dryers in the laundry are original to the building and are troublesome and problematic to operate. Considering the age of the machines and the evolving needs of the facility it is recommended to replace them. This project provides for removal and disposal of the existing tumbler dryers with new units. A total of 4 dryers was used for this estimate.
COMPRESSOR REPLACEMENTS

There are 2 compressors on the roof serving the 5 refrigerators and 1 compressor serving the freezers. They were not included in the recent HVAC Replacement projects and should be scheduled for replacement. This project would provide for new condensers to be installed including all required connections to utilities. The estimate includes removal and disposal of the existing equipment.

Project Index #: 1424HVA4
Construction Cost $115,000

CULINARY FLOORING REPLACEMENT

The epoxy floor covering in the Culinary is worn and damaged and should be resurfaced. This project provides for cleaning and repairing the existing floor, applying a bonding agent, pouring a new polymer surface and applying an appropriate finish product. The product must meet the requirements of the health department for food service and preparation.

This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

Project Index #: 1424INT2
Construction Cost $250,000

ELECTRICAL UPGRADE

This building was constructed before the high demand for electrical services were needed for computers and other electrical devices. As time has progressed, the buildings electrical demand and system has changed. It is utilized to its current maximum potential. The electrical panels and receptacles are at their limit. It is recommended the entire system be upgraded to meet the evolving needs of the building.

Project Index #: 1424ELE1
Construction Cost $972,000

EXIT SIGN & EGRESS LIGHTING UPGRADE

The emergency egress lighting is insufficient and the exit signs do not meet current standards. This project would provide for the purchase and installation of self-illuminated or LED style exit signs with battery-backed internal systems as well as emergency egress lighting to provide illumination along the egress route. IBC - 2012 Chapter 10 was referenced for this project.

This project or a portion thereof was previously recommended in the FCA report dated 06/04/2002 and 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

Project Index #: 1424SFT1
Construction Cost $12,500

EXTERIOR FINISHES

It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building excluding the roof. Included in the cost is sealing and painting the concrete masonry unit walls, repairing cracked and damaged CMU and caulking of the windows, flashing, fixtures and all other penetrations. It is recommended that the building be sealed, painted and caulked in the next 2-3 years, and that it be scheduled on a cyclical basis to maintain the integrity of the structure.

This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

Project Index #: 1424EXT2
Construction Cost $243,000

GREASE INTERCEPTOR REPLACEMENT

The underground grease interceptor to the west of the building is not currently operating correctly. Maintenance staff reported that the metal structure is two thirds disintegrated underground. This project would provide for the purchase and installation of a new grease interceptor and connection to the existing sewer system.

Project Index #: 1424PLM1
Construction Cost $25,000

HEAT EXCHANGER REPLACEMENT

The two shell and tube heat exchangers in the building were installed in 1987 and are original to the building. They are not energy efficient and have reached the end of their expected and useful life. This project would provide for installation of two new plate frame heat exchangers, one for the domestic water and one for the mechanical system. This project includes removal and disposal of the existing units and all required connections to utilities.

Project Index #: 1424HVA2
Construction Cost $16,000
INTERIOR FINISHES

The interior finishes are in fair condition. It is recommended to paint the interior walls and ceilings at least once in the next 2-3 years, and that it be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability.

This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

Project Index #: 1424INT1
Construction Cost $243,000

JANITORS CLOSET REPAIRS

The mop sinks in the Janitors Closets are mounted adjacent to gypsum board and are showing signs of water damage. This project would provide fiberglass reinforced panels (FRP) to be installed on the walls adjacent to the mop sink. The FRP shall extend two feet beyond the edge of the sink and a minimum of 54” above the floor finish. Typical of two Janitors Closets.

Project Index #: 1424INT5
Construction Cost $2,800

TRASH COMPACTOR REPLACEMENT

The two existing trash compactors are original to the building and due for replacement. The compactors are rusted, have been damaged by heavy equipment and do not function properly anymore. This project would provide for replacing the existing compactors with two new 30 yard self-contained trash compactors.

Project Index #: 1424ENV2
Construction Cost $150,000

PRIORITY CLASS 3 PROJECTS

Total Construction Cost for Priority 3 Projects: $583,200

ROOF REPLACEMENT

The roof on this building was in fair condition at the time of the survey. The statewide roofing program has set the useful life of an average roof at 15 years. The roof warranty expires at the end of the same time frame. The temperature fluctuations throughout the year, consistent wind which blows sand and dirt on to the roof membrane, and constant exposure to the sun are contributing factors to wear and deterioration. The current roofing system was installed in 2006. It is recommended that this building be re-roofed in the next 4-5 years to be consistent with the roofing program and the end of the warranty period.

BUILDING INFORMATION:

- Gross Area (square feet): 48,600
- Year Constructed: 1987
- Exterior Finish 1: 100 % Masonry
- Exterior Finish 2: 
- Number of Levels (Floors): 1
- Basement? No
- IBC Occupancy Type 1: 100 % I-3
- IBC Occupancy Type 2: 
- Construction Type: Concrete Masonry Units & Steel
- IBC Construction Type: II-A
- Percent Fire Supressed: 100 %

PROJECT CONSTRUCTION COST TOTALS SUMMARY:

- Priority Class 1: $168,200
- Priority Class 2: $2,186,300
- Priority Class 3: $583,200
- Grand Total: $2,937,700
- Project Construction Cost per Square Foot: $60.45
- Total Facility Replacement Construction Cost: $17,010,000
- Facility Replacement Cost per Square Foot: $535
- FCNI: 17%
BUILDING #9 - SCHEDULED SERVICES
BUILDING REPORT

Building #9 - Scheduled Services is a concrete masonry unit (CMU) and steel framed structure with a single-ply roofing system on a concrete foundation. The building contains administrative functions, including the wardens’ office, support staff offices, staff training, muster areas, staff restrooms and locker rooms, as well as visitation, infirmary, medical and dental offices, canteen, and the response team office. Heating and cooling is provided by the roof mounted HVAC units supplied by the central plant closed loop HVAC system. The public visitation area has Men's and Women's restrooms which are mostly ADA compliant.

| ADA RESTROOM REMODEL | |
| This project would provide funding for remodeling the Men's and Women's restrooms into ADA compliant restrooms. These items may include a new sink, toilet, hardware, mirrors, fixtures, flooring and paint. The 2012 IBC, ICC/ANSI A117.1 - 2009, NRS 338.180 and the most current version of the ADA Standards For Accessible Design were used as a reference for this project. |
| Project Index #: 1423ADA3 |
| Construction Cost $30,000 |

| ADA SIGNAGE | |
| Americans with Disabilities Act (ADA) regulations pertaining to building access has established building signage criteria for permanent spaces in buildings. The criteria includes: sign mounting heights and locations; character heights and proportions; raised and Braille characters/pictograms; and sign contrast and finish. The signage in this facility does not comply with this criteria. It is recommended that applicable signage be installed where required. The 2012 IBC, ICC/ANSI A117.1 - 2009, NRS 338.180 and the most current version of the ADA Standards For Accessible Design were used as a reference for this project. This project or a portion thereof was previously recommended in the FCA report dated 06/04/2002 and 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015. |

BREAK ROOM REMODELS

Project Index #: 1423INT7
Construction Cost $125,000

The kitchenette and associated cabinets in the employee break rooms are original to the building. The quality of construction and installation were inadequate for the high usage at this facility, and the cabinets and counter tops are delaminating and failing. This project recommends the replacement of the existing kitchen counters, cabinets, and associated equipment with heavy duty, quality components. The cabinets should be finished inside and outside with a melamine or similar finish which encapsulates the door, frame, and shelving. The countertops should be constructed of a highly durable product, such as stainless steel, over a moisture resistant underlayment to minimize swelling and damage from water exposure. This estimate includes disposal of the existing materials.

COUNTERTOP REPLACEMENT

Project Index #: 1423INT3
Construction Cost $25,000

The countertops throughout the building are showing signs of wear and tear particularly at the Formica edges and corners. The quality of construction and installation were inadequate for the high usage at these facilities, and the counter tops are delaminating and failing. This project recommends the replacement of the existing damaged countertops with heavy duty, quality finishes. The countertops should be constructed of a highly durable product, such as stainless steel, over a moisture resistant underlayment to minimize swelling and damage from water exposure. This estimate includes disposal of the existing materials.

This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

ELECTRICAL UPGRADE

Project Index #: 1423ELE1
Construction Cost $1,130,000

This building was constructed before the high demand for electrical services were needed for computers and other electrical devices. As time has progressed, the building's electrical demand and system has changed. It is utilized to its current maximum potential. The electrical panels and receptacles are at their limit. It is recommended the entire system be upgraded to meet the evolving needs of the building.

EXTERIOR FINISHES

Project Index #: 1423EXT2
Construction Cost $282,500

It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building excluding the roof. Included in the cost is sealing and painting the concrete masonry unit walls and caulking of the windows, flashing, fixtures and all other penetrations. It is recommended that the building be sealed, painted and caulked in the next 2-3 years, and that it be scheduled on a cyclical basis to maintain the integrity of the structure.

This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

FLOORING REPLACEMENT

Project Index #: 1423INT2
Construction Cost $204,000

The sheet vinyl flooring in the Infirmary and vinyl composition tile (VCT) in the Library, Chapel and the Visitor's Room is approaching the end of its useful life and has some damage. It is recommended that the flooring in the building be replaced. This project would provide for new 12x12 VCT and sheet vinyl to be installed. Removal and disposal of the old, damaged flooring is included in this estimate.

This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

HEAT EXCHANGER REPLACEMENTS

Project Index #: 1423HVA3
Construction Cost $16,000

The two shell and tube heat exchangers in the building were installed in 1987 and are original to the building. They are not energy efficient and have reached the end of their expected and useful life. This project would provide for installation of two new plate frame heat exchangers, one for the domestic water and one for the mechanical system. This project includes removal and disposal of the existing units and all required connections to utilities.
HOSPITAL CRASH RAIL REPLACEMENT

The medical wing has a crash guard system installed to protect the walls from damage from gurneys and medical equipment. Over the years, it has sustained moderate damage and is approaching the end of its useful life. This project provides for the replacement of the existing system with a new one, including vinyl cover and aluminum retaining clips. This project or a portion thereof was previously recommended in the FCA report dated 06/04/2002 and 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

Project Index #: 1423INT4
Construction Cost $25,000

INTERIOR WALL INSULATION

The building is constructed of concrete masonry units (CMU) with minimal insulation. The north facing exterior wall does not provide enough insulation in the colder months of the year. Maintenance staff has had ongoing difficulties balancing the heating to provide a comfortable work environment. This project recommends adding 2" rigid insulation, gypsum board and paint on the interior of the wall. The estimate is based on $12.00 per square foot of wall space. This project should be implemented concurrently with the Window Replacement project.

Project Index #: 1423EXT4
Construction Cost $43,200

JANITORS CLOSET REPAIRS

The mop sinks in the Janitors Closets are mounted adjacent to gypsum board and are showing signs of water damage. This project would provide fiberglass reinforced panels (FRP) to be installed on the walls adjacent to the mop sink. The FRP shall extend two feet beyond the edge of the sink and a minimum of 54” above the floor finish. Typical of seven Janitors Closets.

This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

Project Index #: 1423INT5
Construction Cost $9,800

LIGHTING UPGRADE

The existing lighting fixtures are the older T-8 type which are of poor quality, and are failing prematurely. This project will upgrade fixtures to higher efficiency units with a longer life cycle. LED lamps are suggested to replace the T-8 lamps currently installed. Occupancy sensors will be installed in restrooms, conference rooms and other low occupancy areas for additional savings. Any electrical wiring upgrades are not included in this estimate.

Project Index #: 1423ENR2
Construction Cost $84,750

WINDOW REPLACEMENT

The existing windows in this building are older dual pane wire construction. Many have broken seals and all are not energy efficient. This project would provide for the removal and replacement of the windows with new dual pane security rated window systems with higher insulation ratings. This project should be implemented concurrently with the Interior Wall Insulation project.

Project Index #: 1423EXT3
Construction Cost $69,600

PRIORITY CLASS 3 PROJECTS

Total Construction Cost for Priority 3 Projects: $960,500

Long-Term Needs Four to Ten Years

INTERIOR FINISHES

The interior finishes are in fair condition. It is recommended to paint the interior walls and ceilings at least once in the next 5-6 years and that it be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability.

Project Index #: 1423INT6
Construction Cost $282,500

ROOF REPLACEMENT

The roof on this building was in fair condition at the time of the survey. The statewide roofing program has set the useful life of an average roof at 15 years. The roof warranty expires at the end of the same time frame. The temperature fluctuations throughout the year, consistent wind which blows sand and dirt on to the roof membrane, and constant exposure to the sun are contributing factors to wear and deterioration. The current roofing system was installed in 2006. It is recommended that this building be re-roofed in the next 4-5 years to be consistent with the roofing program and the end of the warranty period.

HOUSING UNIT #8
BUILDING REPORT

Housing Unit #8 is a concrete masonry unit (CMU) and steel framed structure with a single-ply roofing system on a concrete foundation. It has an A and B wing each with individual cells on two levels, 4 shower stalls, 2 on the lower level and 2 on the upper level in each wing, a control room, day room, mechanical spaces, sally port, counselor rooms, and an outdoor recreation area. There are two designated ADA accessible cells in each wing but they may not be 100% compliant based on the most current ADA accessible design guidelines. Heating and cooling is provided by the roof mounted HVAC units supplied by the central plant closed loop HVAC system.

PRIORITY CLASS 1 PROJECTS  
Total Construction Cost for Priority 1 Projects: $4,000

Currently Critical  
Immediate to Two Years

DUAL LEVEL DRINKING FOUNTAIN INSTALLATION  
Project Index #: 1422ADA2  
Construction Cost $4,000

This building contains a water fountain that is not ADA compliant. The 2012 IBC Section 1109.5 states where drinking fountains are provided on an exterior site, on a floor or within a secured area, no fewer than two drinking fountains shall be provided. One shall comply with the requirements for people who use a wheelchair and one shall comply with the requirements for standing persons. This project would provide funding for the purchase and installation of two drinking fountains to meet the ADA requirements.

PRIORITY CLASS 2 PROJECTS  
Total Construction Cost for Priority 2 Projects: $863,700

Necessary - Not Yet Critical  
Two to Four Years

ELECTRONIC LOCKS/ CONTROLS REPLACEMENT  
Project Index #: 1422SEC2  
Construction Cost $565,000

The controls for the door locks and security systems are built on a custom panel and interface. The controls are difficult to repair, parts are becoming increasingly difficult to locate, and the type and configuration of the switches are limited by the physical size of the consoles. This project recommends replacing the existing mechanical switching system with a computer system and electronic interface. Remote costs and secure facility allowance were included in the project estimates.

This project or a portion thereof was previously recommended in the FCA report dated 06/04/2002 and 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

EXTERIOR FINISHES  
Project Index #: 1422EXT2  
Construction Cost $149,350

It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building excluding the roof. Included in the cost is sealing and painting the concrete masonry unit walls and caulking of the windows, flashing, fixtures and all other penetrations. It is recommended that the building be sealed, painted and caulked in the next 2-3 years, and that it be scheduled on a cyclical basis to maintain the integrity of the structure.

**EXTERIOR FINISHES**

It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building excluding the roof. Included in the cost is sealing and painting the concrete masonry unit walls and caulking of the windows, flashing, fixtures and all other penetrations. It is recommended that the building be sealed, painted and caulked in the next 2-3 years, and that it be scheduled on a cyclical basis to maintain the integrity of the structure.

This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.
INTERIOR FINISHES

The interior finishes are in fair condition. It is recommended to paint the interior walls and ceilings at least once in the next 2-3 years and that it be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability. This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.

PRIORITY CLASS 3 PROJECTS

ROOF REPLACEMENT

The roof on this building was in fair condition at the time of the survey. The statewide roofing program has set the useful life of an average roof at 15 years. The roof warranty expires at the end of the same time frame. The temperature fluctuations throughout the year, consistent wind which blows sand and dirt on to the roof membrane, and constant exposure to the sun are contributing factors to wear and deterioration. The current roofing system was installed in 2006. It is recommended that this building be re-roofed in the next 4-5 years to be consistent with the roofing program and the end of the warranty period.

HOUSING UNIT #5
BUILDING REPORT

Housing Unit #5 is a concrete masonry unit (CMU) and steel framed structure with a single-ply roofing system on a concrete foundation. It has an A and B wing each with individual cells on two levels, 4 shower stalls, 2 on the lower level and 2 on the upper level in each wing, a control room, day room, mechanical spaces, sally port, counselor rooms, and an outdoor recreation area. There are two designated ADA accessible cells in each wing but they may not be 100% compliant based on the most current ADA accessible design guidelines. Heating and cooling is provided by the roof mounted HVAC units supplied by the central plant closed loop HVAC system.

This project or a portion thereof was previously recommended in the FCA report dated 09/18/2007. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2015.
HEAT EXCHANGER REPLACEMENTS

The two shell and tube heat exchangers in the building were installed in 1987 and are original to the building. They are not energy efficient and have reached the end of their expected and useful life. This project would provide for installation of two new plate frame heat exchangers, one for the domestic water and one for the mechanical system. This project includes removal and disposal of the existing units and all required connections to utilities.

| Project Index #: 1419HVA1 | Construction Cost $16,000 |

INTERIOR FINISHES

The interior finishes are in fair condition. It is recommended to paint the interior walls and ceilings at least once in the next 2-3 years and that it be scheduled on a cyclical basis to maintain the integrity of the structure. - Priority Class 3: $358,440 Facility Replacement Cost per Square Foot: $350
- Grand Total: $1,226,140 FCNI: 12%

NOTES:

The deficiencies outlined in this report were noted from a visual survey. The costs do not represent the cost of a complete facility renovation or maintenance needs. Recommended projects do not include telecommunications, furniture, window treatment, space change, program issues, relocation, swing space, or costs that could not be identified or determined from the survey and available building information. Individual projects and costs noted herein may be impacted by new construction materials or methods, agency projects, and pending or proposed Capital Improvement Projects (CIP).

This report was created under the authority found in NRS 341.128 by the State Public Works Division and should be utilized as a planning level document.
