STATE OF NEVADA PUBLIC WORKS DIVISION
FACILITY CONDITION ANALYSIS

Report distributed in May 2021
The Facility Condition Analysis Program was created under the authority found in NRS 341.128. The State Public Works Division develops this report using cost estimates based on contractor pricing which includes materials, labor, location factors and profit and overhead. The costs of project design, management, special testing and inspections, inflation and permitting fees are not included. Cost estimates are derived from the R.S. Means Cost Estimating Guide and from comparable construction costs of projects completed by SPWD project managers.

The deficiencies outlined in this report were noted from a visual survey. This report does not address routine maintenance needs. Recommended projects do not include telecommunications, furniture, window treatments, space change, program issues, or costs that could not be identified or determined from the survey and available building information. If there are buildings without projects listed, this indicates that only routine maintenance needs were found. This report considers probable facility needs for a 10 year planning cycle.

This report is not a guarantee of funding and should not be used for budgeting purposes. This report is a planning level document for agencies and State Public Works Division to assess the needs of the Building and/or Site and to help support future requests for ADA upgrades / renovations, Capital Improvement Projects, and maintenance. The final scope and estimate of any budget request should be developed by a qualified individual. Actual project costs will vary from those proposed in this report when the final scope and budget are developed.

Establishing a Facility Condition Needs Index (FCNI) for each building

The FCA reports identify maintenance items and establish construction cost estimates. These costs are summarized at the end of the report and noted as construction costs per square foot. A FCNI is commonly used by facility managers to make a judgment whether to recommend whole replacement of facilities, rather than expending resources on major repairs and improvements. The FCNI is a ratio between the proposed facility upgrade costs and facility replacement costs (FRC). Those buildings with indices greater than .50 or 50% are recommended to be considered for complete replacement.

Class Definitions

PRIORITY CLASS 1 - Currently Critical (Immediate to Two Years)

Projects in this category require immediate action to return a facility to normal operation, stop accelerated deterioration, correct a fire/life safety hazard, or correct an ADA requirement.

PRIORITY CLASS 2 - Necessary - Not Yet Critical (Two to Four Years)

Projects in this category include conditions requiring appropriate attention to preclude predictable deterioration or potential downtime and the associated damage or higher costs if deferred further.

PRIORITY CLASS 3 - (Four to Ten Years)

Projects in this category include items that represent a sensible improvement to existing conditions. These items are not required for the most basic function of a facility; however, Priority 3 projects will either improve overall usability and/or reduce long-term maintenance.

Cave Lake State Park is located in the Schell Creek Mountain Range about 15 miles southeast of Ely. The park encompasses 1240 acres. One of the major attractions is the 32 acre Cave Lake. The area provides boating, fishing, hiking, picnicking and camping opportunities year round. The facilities at the site are served by a spring fed water system. This system supplies water to the two 10,000 gallon underground water storage tanks, which provide gravity fed water to the facilities. The power for the facilities is supplied by individual solar panels that have batteries for stored power.

**ADA UPGRADES - BOAT DOCK**

The ADA provides for accessibility to sites and services for people with physical limitations. The existing ADA parking space at the boat dock does not meet the ADA requirements. The boat dock has a picnic area that should be ADA accessible. This project provides funding to bring the existing ADA parking space up to code including the removal of the asphalt and replacement with P.C. concrete, updated signage, re-striping, re-grading and any other necessary upgrades. The project funding will also provide for an accessible path of travel from the parking space and an accessible picnic table at the picnic area. NRS 338.180, IBC - 2018, ICC/ANSI A117.1 - 2009 and ADAAG - 2010 were referenced for this project. This project should be implemented concurrently with the BOAT DOCK REPAIRS project. This project or a portion thereof was previously recommended in the FCA report dated 04/11/2002 and 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

**ADA UPGRADES - DAY USE**

The ADA provides for accessibility to sites and services for people with physical limitations. A compliant path of travel from the accessible parking space to the restroom and picnic area and an accessible picnic table are necessary to comply with ADA accessibility requirements. This project provides funding for a compliant path of travel and an accessible picnic table. NRS 338.180, IBC - 2018, ICC/ANSI A117.1 - 2009 and ADAAG - 2010 were referenced for this project. This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

**ADA UPGRADES - GROUP USE**

The ADA provides for accessibility to sites and services for people with physical limitations. The Group Use area does not have an accessible path of travel to the restroom, picnic area or presentation area. This project provides funding to install a compliant path of travel from the accessible parking space to these three areas as well as upgrading the picnic table to an accessible table. NRS 338.180, IBC - 2018, ICC/ANSI A117.1 - 2009 and ADAAG - 2010 were referenced for this project. This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.
ADA UPGRADES - LAKEVIEW CAMPGROUND

The Lakeview Campground currently has one accessible space that is well graded, but is not in compliance with ADA regulations. Upgrades to the campsite should include 20'-0" wide concrete drive aisles for RV/ tent trailer sites and accessible amenities on an accessible route including grills, picnic tables, fire rings and water & electric utilities. This project provides for upgrading the existing accessible campsite to a fully compliant accessible campsite. NRS 338.180, IBC - 2018, ICC/ANSI A117.1 - 2009 and ADAAG – 2010 were referenced for this project.

This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

PHOTOVOLTAIC EQUIPMENT REPLACEMENT

The existing photovoltaic equipment site wide is over 25 years old. This original equipment has a design life of 7 years. The batteries no longer hold a full charge and replacement parts are no longer available. This project will replace the photovoltaic equipment site wide including, but not limited to: the solar panels; tracking systems; control panels; inverters and the batteries. The removal and the disposal of the existing equipment are included in this estimate. This project will provide for new photovoltaic equipment for the Cave Lake Office/ Shop, the two residences, three restrooms and the Fish Cleaning Station.

This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

STAIR REPLACEMENT - GROUP USE

There is a flight of stairs in the group use area that provides access to the shoreline. The stairs are made of wood that are set in the dirt and they do not have the proper handrails per IBC. This project would provide for replacing the existing stairs with concrete steps and compliant handrails in accordance with IBC Section 1012.

This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

BOAT DOCK REPAIRS

The boat dock has an area covered by concrete pavers which is settling and due for repairs. The settled area causes a tripping hazard and will continue to settle due to ponding water. This project would provide for the removal of the existing pavers, adding fill, compacting and installing new pavers. This project should be implemented concurrently with the ADA UPGRADES - BOAT DOCK project.

This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

CRACK FILL & SEAL ASPHALT PAVING

It is important to maintain the asphalt concrete paving on the site. This project would provide for: minor crack filling; slurry sealing of the paving site wide, including parking areas; the turnout at the information kiosk; the boat ramp access, the maintenance yard and striping. All other paving is maintained by NDOT. This project should be scheduled on a 5 year cyclical basis to maintain the integrity of the paving and prevent premature failure. 50,000 square feet of asphalt area was used to generate this estimate.

This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.
PROJECT CONSTRUCTION COST TOTALS SUMMARY:

Priority Class 1: $338,750
Priority Class 2: $68,750
Priority Class 3: $0

Grand Total: $407,500
ELK FLAT INFORMATION KIOSK
BUILDING REPORT

The Elk Flat Information Kiosk is a wood framed signage structure located in the Elk Flat Campground adjacent to the restroom.

PRIORITY CLASS 2 PROJECTS

Total Construction Cost for Priority 2 Projects: $2,400

Necessary - Not Yet Critical Two to Four Years

Project Index #: 3022EXT1
Construction Cost $960

EXTERIOR FINISHES

It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building. Included in the cost is sanding and sealing the wood and caulking of the flashing, fixtures and all other penetrations. It is recommended that the building be painted in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure.
This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

Project Index #: 3022EXT2
Construction Cost $1,440

ROOF REPLACEMENT

The corrugated metal roof on this building was in poor condition at the time of the survey. It is recommended that this building be re-roofed in the next 2-3 years with a standing seam metal roofing system. This estimate includes removal and disposal of the old roof.

BUILDING INFORMATION:

Gross Area (square feet): 15
Year Constructed: 2003
Exterior Finish 1: 100 % Wood Post & Beam
Exterior Finish 2: 0 %
Number of Levels (Floors): 1 Basement? No

IBC Occupancy Type 1: 100 % U
IBC Occupancy Type 2: 0 %
Construction Type: Wood Framing
IBC Construction Type: V-B
Percent Fire Supressed: 0 %

PROJECT CONSTRUCTION COST TOTALS SUMMARY:

Priority Class 1: $0 Project Construction Cost per Square Foot: $160.00
Priority Class 2: $2,400 Total Facility Replacement Construction Cost: $2,000
Priority Class 3: $0 Facility Replacement Cost per Square Foot: $100
Grand Total: $2,400 FCNI: 120%
CAVE LAKE INFORMATION BOOTH
BUILDING REPORT

The Cave Lake Information Booth is a wood framed structure with a metal roofing system on a concrete slab-on-grade foundation. The building is located at the entrance to Cave Lake Road. It provides informational material to the public which is posted inside.

PRIORITY CLASS 1 PROJECTS

Currently Critical

ADA PARKING SPACE
The ADA provides for accessibility to sites and services for people with physical limitations. A concrete parking area and passenger loading area are necessary to comply with ADA requirements. This project would provide for a concrete van accessible ADA parking and loading space and walkway to the information booth. This will require regrading, installing P.C. concrete, striping, signage and any other necessary upgrades. NRS 338.180, IBC - 2018, ICC/ANSI A117.1 - 2009 and ADAAG - 2010 were referenced for this project.

Total Construction Cost for Priority 1 Projects: $2,500
Project Index #: 3021ADA1
Construction Cost $2,500

Prioritize Class 2 Projects

Necessary - Not Yet Critical

EXTERIOR FINISHES
It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building. Included in the cost is sanding and sealing the wood and caulking of the flashing, fixtures and all other penetrations. It is recommended that the building be painted in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure.

Total Construction Cost for Priority 2 Projects: $1,440
Project Index #: 3021EXTI
Construction Cost $480

INTERIOR FINISHES
It is recommended to paint the interior walls and ceilings at least once in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and adequately prepared to receive the coating. An epoxy-based paint should be utilized in wet areas for durability. This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

Total Construction Cost for Priority 3 Projects: $0
Project Index #: 3021INT1
Construction Cost $960

LAKEVIEW CAMPGROUND YURT
BUILDING REPORT

The Lakeview Campground Yurt is a prefabricated canvas structure located in site No. 34 which provides a unique camping experience for the public.

PRIORITY CLASS 1 PROJECTS
Currently Critical
Immediate to Two Years

EXTERIOR HANDRAIL REPLACEMENT
The exterior stairs and deck have handrails and a guardrail that do not meet building code requirements for safety. The gripping surfaces are incorrect, they are not continuous from the top to bottom landings and the deck is lacking a guardrail. This project recommends the installation of guardrails and handrails in accordance with the 2018 IBC Section 1012 and 1013.

This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

Total Construction Cost for Priority 1 Projects: $1,000
Project Index #: 3020SFT1
Construction Cost $1,000

PRIORITY CLASS 2 PROJECTS
Necessary - Not Yet Critical
Two to Four Years

EXTERIOR/ INTERIOR FINISHES
It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior and interior of the building. Included in the cost is sanding and sealing the wood framing. It is recommended that the wood framing be sealed in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure.

This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

Total Construction Cost for Priority 2 Projects: $320

RESIDENCE #2 – Elk Flat is a wood framed modular home with an asphalt composition roofing system on a concrete slab-on-grade foundation. The home is heated by propane heat and a wood stove. Water is provided from the spring fed water system that serves the entire park.

**PRIORITY CLASS 1 PROJECTS**

**Total Construction Cost for Priority 1 Projects:** $27,500

**GENERATOR REPLACEMENT**

There is a propane-fired generator on site that has reached the end of its expected life and is no longer operating. The generator provides backup power when the photovoltaic system cannot keep up with demand. It is recommended that a new 12 kW propane-fired generator be installed.

This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

**Project Index #: 1295ENR1**

**Construction Cost:** $25,000

**SMOKE DETECTOR UPGRADE**

IRC 2018 Section R314 and R315.3 explains the requirements for smoke alarms in dwelling units. This includes: installing and maintaining smoke alarms in each sleeping room; having a carbon monoxide and smoke detector on the ceiling or wall outside of each sleeping area; in the immediate vicinity of bedrooms when an alteration, repair or addition requiring a permit occurs. IRC 2018, requires that smoke detectors and carbon monoxide alarms be UL rated. State Fire Marshal NAC 477.915 (3) requires that smoke detectors be connected to the wiring in a building and include a battery for emergency backup power. This project would provide funding for the purchase and installation of smoke alarms and carbon monoxide alarms in accordance with IRC and NAC laws.

This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

**Project Index #: 1295EXT1**

**Construction Cost:** $10,080

**INTERIOR FINISHES**

The interior finishes are in fair condition. It is recommended that the interior walls be painted at least once in the next three to four years. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability.

This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

**Project Index #: 1295INT1**

**Construction Cost:** $10,080
ROOF REPLACEMENT

The asphalt composition shingle roof on this building was in poor condition at the time of the survey. It is recommended that this building be re-roofed in the next two to three years with a new 50 year asphalt composition shingle roof and new underlayment. This estimate includes removal and disposal of the old roof. This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

Construction Cost $15,120

WINDOW REPLACEMENT

The windows are original, dual pane construction in a metal frame. These older windows have damaged seals, are drafty and not energy efficient. This project recommends replacing the windows with dual pane, higher efficiency units. This estimate is for the replacement of 8 units. Removal and disposal of the existing windows is included in this estimate. This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

KITCHEN REMODEL
The kitchen was in fair to poor condition at the time of the survey. The cabinets and equipment are showing signs of general wear and tear and are approaching the end of their expected life. This project recommends the replacement of the existing kitchen cabinets, countertops, fixtures and equipment with mid-range, high quality components.

Project Index #: 1294INT2
Construction Cost $35,000

ROOF REPLACEMENT
The asphalt composition shingle roof on this building was in poor condition at the time of the survey. It is recommended that this building be re-roofed in the next 2-3 years with a new 50 year asphalt composition shingle roof and new underlayment. This estimate includes removal and disposal of the old roof.

Project Index #: 1294EXT2
Construction Cost $18,000

WATER HEATER REPLACEMENT
There is a 50 gallon propane-fired water heater in the building. The average life span of a water heater is eight to ten years. With the passage of time and constant use, this unit is showing signs of wear and should be scheduled for replacement in the next 2-3 years. It is recommended that a new propane-fired water heater be installed. Removal and disposal of the existing equipment is included in this estimate.

Project Index #: 1294PLM1
Construction Cost $1,750

EXTERIOR SIDING REPLACEMENT
The restroom has painted T1-11 siding that is in poor condition and due for replacement. It is cracking and buckling from exposure and will no longer hold paint. This project recommends removing the T1-11 siding and replacing it with new Cementitious T1-11.

HEATER REPLACEMENT
The building is heated by one wall mounted propane-fired heating unit. It is original to the building and is reaching the end of its useful life. This project provides for disposal of the existing unit and replacement with a new propane-fired unit including connections to utilities.

INTERIOR FINISHES
The interior finishes are in fair condition. It is recommended that the interior walls be painted at least once in the next 2-3 years. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability.
This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

JANITORS CLOSET REPAIRS
The mop sink in the plumbing chase is mounted adjacent to studs without a wall backing and is showing signs of water damage. This project would provide for a Cementitious Backer and FRP to be installed on the walls adjacent to the mop sink. The Cementitious Backer and FRP shall extend two feet beyond the edge of the sink and a minimum of 54" above the floor finish.

RESTROOM REMODEL
The restrooms in the building were in poor condition at the time of the survey. They are original to the building and are due for a complete remodel. This project would provide for a complete remodel of the restroom fixtures, hardware, floor and wall finishes.

WATER HEATER REPLACEMENT
There is an on-demand propane-fired water heater in the building. The average life span of a water heater is eight to ten years. With the passage of time and constant use, this unit is showing signs of wear and should be scheduled for replacement in the next 2-3 years. It is recommended that a new on-demand propane-fired water heater be installed. Removal and disposal of the existing equipment is included in this estimate.

BUILDING INFORMATION:
- Gross Area (square feet): 380
- Year Constructed: 1991
- Exterior Finish 1: 100% Painted Wood Siding
- Exterior Finish 2: %
- Number of Levels (Floors): 1
- Basement?: No
- Percent Fire Suppressed: 0%

PROJECT CONSTRUCTION COST TOTALS SUMMARY:
- Priority Class 1: $32,500
- Priority Class 2: $65,600
- Priority Class 3: $0
- Grand Total: $98,100
- Project Construction Cost per Square Foot: $258.16

- Facility Replacement Cost per Square Foot: $100
- FCNI: 258%
RESTROOM #2 - DAY USE

BUILDING REPORT

The Restroom #2 – Day Use is a wood framed structure with a metal roofing system on a concrete slab-on-grade foundation. There are a total of 2 restrooms. Water is supplied by a gravity fed water and storage system, propane heat and solar panels for power with a battery backup.

**PRIORITY CLASS 1 PROJECTS**

<tr>
<td>ADA SIDEWALK REPLACEMENT</td>
<td>1288ADA1</td>
<td>$22,500</td>
</tr>
</tbody>
</table>

The concrete sidewalk around the building is in need of replacement. It is cracked, spalling and in some areas it exceeds a 2% slope. This project would provide for the removal and replacement of the concrete sidewalks. 1500 SF of 4" thick concrete was used for this estimate. The 2018 IBC, ICC/ANSI A117.1 - 2009, NRS 338.180 and the most current version of the ADA Standards for Accessible Design were used as references for this project.

It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building. Included in the cost is sanding, priming and painting and caulking of the windows, flashing, fixtures and all other penetrations. It is recommended that the building be painted in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. This project should coincide with the siding replacement project.

This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

</tbody>
</table>

The building is heated by one wall mounted propane-fired heating unit. It is original to the building and is reaching the end of its useful life. This project provides for disposal of the existing unit and replacement with a new energy efficient propane-fired unit including connections to utilities.

This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.
INTERIOR FINISHES

The interior finishes are in fair condition. It is recommended that the interior walls be painted at least once in the next two to four years. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability.

This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

WIRING CLEANUP

The wiring is disorganized and not in proper electrical boxes. This creates a safety issue during repairs or upgrades. This project would provide for organization, proper labeling and for the wiring to be placed in electrical boxes per NEC 2017.

CAVE LAKE OFFICE/SHOP
BUILDING REPORT

The Cave Lake Office/Shop is a wood framed structure with a metal roofing system on a concrete masonry unit foundation. There is a small office area, unisex restroom, storage, generator room and a maintenance shop located in the facility. Power is supplied by solar panels with 2 diesel powered generators for backup and emergencies. The shop area has 2 sectional overhead doors which provide space for maintenance or repair of park equipment. The shop is heated with a wood stove and a propane fired heater for the office area.

PRIORITY CLASS 2 PROJECTS

Immediate to Five Years

| Total Construction Cost for Priority 2 Projects: $0 |

ADA RESTROOM UPGRADE

The building does not have an accessible restroom. The existing restroom does not meet the ADA requirements. A complete retrofit is necessary. This project would provide funding for construction of a unisex accessible restroom. Items may include a new sink, toilet, hardware, mirrors, fixtures, flooring and paint. The 2018 IBC, ICC/ANSI A117.1 - 2009, NRS 338.180 and the most current version of the ADA Standards for Accessible Design were used as references for this project.

This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

ADA UPGRADES

Section 4.13.9 of the ADAAG states that handles, pulls, latches, locks and other operating devices on accessible doors shall have a shape that is easy to grasp with one hand and does not require tight grasping, tight pinching, or twisting of the wrist to operate. Lever-operated mechanisms, push-type mechanisms, and U-shaped handles are acceptable designs. It is recommended that proper lever hardware be installed in this building to meet these requirements.

EXIT SIGN AND EGRESS LIGHTING UPGRADE

The emergency egress lighting is insufficient and the exit signs do not meet current standards. This project would provide for the purchase and installation of self-illuminated or LED style exit signs with battery-backed internal systems as well as emergency egress lighting to provide illumination along the egress route. IBC 2018 Chapter 10 was referenced for this project.

This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

FIRE ALARM SYSTEM INSTALLATION

This building is lacking a fire detection and alarm system. It is recommended that a fire detection and alarm system be installed. When completed, the new system will provide visual, as well as audible notification, in accordance with ADA requirements located in ICC/ANSI A117.1-2009 Section 7 and the 2018 IFC.

This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.
FLUE CLEANING
At the time of the survey the chimney flue had a buildup of creosote deposits and other debris. Creosote buildup in chimneys can lead to chimney fires or flue blockages. Flue blockage, which may be caused by creosote or other debris, such as animal nesting, can cause dangerous fumes to be forced into the building. It is recommended that the chimney flue be swept to clean and maintain the flue system. The Chimney Safety Institute of America recommends that open masonry fireplaces be cleaned at 1/4" of sooty buildup, and sooner if there is any glaze present in the system. Per NFPA 211 it is recommended that this should be performed once a year.

PRIORITY CLASS 2 PROJECTS

CONCRETE APRON REPLACEMENT
The exterior concrete apron at the shop area has extensive cracking and spalling and is due for replacement. This project would provide for the installation of a new 200 square foot, 4" thick concrete slab-on-grade apron at the vehicle garage doors. Removal and disposal of the existing concrete is included in this estimate. This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

EXTERIOR FINISHES
It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building. Included in the cost is sanding and sealing, painting and caulking of the windows, flashing, fixtures and all other penetrations. It is recommended that the building be stained and painted in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

HEATER REPLACEMENT
The building is heated by two wall mounted propane-fired heating units. They are original to the building and are reaching the end of their useful life. This project provides for the disposal of the existing units and the replacement of new propane-fired units including all connections to the utilities.

INTERIOR FINISHES
It is recommended to paint the interior walls and ceilings at least once in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and adequately prepared to receive the coating. An epoxy-based paint should be utilized in wet areas for durability. This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

JANITORS CLOSET REPAIRS
The mop sink in the Janitors Closet is mounted adjacent to gypsum board and is showing signs of water damage. This project would provide FRP to be installed on the walls adjacent to the mop sink. The FRP shall extend two feet beyond the edge of the sink and a minimum of 54" above the floor finish.
LIGHTING UPGRADE

The existing lighting fixtures are the older fluorescent type, and are not energy efficient. This project will upgrade fixtures to higher efficiency units with a longer life cycle. 5,000K LED lamps, without the ballasts, are suggested, and new tombstones (if needed). Occupancy sensors will be installed in low occupancy areas for additional savings. Any electrical wiring upgrades are not included in this estimate.

This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.

SAFETY CABINETS

The building contains many different paints, stains, and other hazardous products located on open shelves and on the floor. This does not meet OSHA standards or IFC for hazardous materials containment. This project would provide a self-closing hazardous storage container in the building and install placards on the building exterior in accordance with OSHA 1910.106 (d) and IFC Chapter 57 Section 5704.3.2.1.3.

SITE BOLLARDS

There are two above ground fuel tanks on the site, one for diesel and unleaded gasoline, and the other holds propane for the building. These tanks do not have adequate bollard coverage. Per IFC 2018 Section 312 Vehicle Impact Protection, there needs to be steel posts installed, not less than 4 inches in diameter and filled with concrete. The spacing shall not be more than 4 feet between posts on center and located not less than 3 feet from each gas tank. This project would provide funding for eight new bollards to be located in front of the tanks.

SMOKE CARBON MONOXIDE ALARM INSTALLATION

Section 907.2.11 of the 2018 IBC and 2018 IFC explains the requirements for smoke alarms in dwelling units including installing and maintaining smoke alarms in each sleeping room and on the ceiling or wall outside of each separate sleeping area in the immediate vicinity of bedrooms. IFC 2018 Section 908.7 carbon monoxide alarms group I or R occupancies located in a building containing a fuel-burning appliance or in a building which has an attached garage shall be equipped with single-station carbon monoxide alarm. The carbon monoxide alarm shall be listed as complying with UL 2034 and be installed and maintained in accordance with NFPA 720 and the manufacturer’s instructions. State Fire Marshal NAC 477.915 (3) requires that smoke detectors and carbon monoxide alarms be connected to the wiring of the building with a battery backup. This project would provide funding for the purchase and installation of a smoke alarm and combo smoke alarm and carbon monoxide alarm in accordance with these codes.

WATER HEATER REPLACEMENT

There is a 50 gallon propane-fired water heater in the building. The average life span of a water heater is eight to ten years. With the passage of time and constant use, this unit is showing signs of wear and should be scheduled for replacement in the next 2-3 years. It is recommended that a new propane-fired water heater be installed. Removal and disposal of the existing equipment is included in this estimate.

This project or a portion thereof was previously recommended in the FCA report dated 09/29/2009. It has been amended accordingly to reflect conditions observed during the most recent survey date of 05/23/2017.
