The Facility Condition Analysis Program was created under the authority found in NRS 341.128. The State Public Works Division develops this report using cost estimates based on contractor pricing which includes materials, labor, location factors and profit and overhead. The costs of project design, management, special testing and inspections, inflation and permitting fees are not included. Cost estimates are derived from the R.S. Means Cost Estimating Guide and from comparable construction costs of projects completed by SPWD project managers.

The deficiencies outlined in this report were noted from a visual survey. This report does not address routine maintenance needs. Recommended projects do not include telecommunications, furniture, window treatments, space change, program issues, or costs that could not be identified or determined from the survey and available building information. If there are buildings without projects listed, this indicates that only routine maintenance needs were found. This report considers probable facility needs for a 10 year planning cycle.

This report is not a guarantee of funding and should not be used for budgeting purposes. This report is a planning level document for agencies and the State Public Works Division to assess the needs of the Building and/or Site and to help support future requests for ADA upgrades / renovations, Capital Improvement Projects and maintenance. The final scope and estimate of any budget request should be developed by a qualified individual. Actual project costs will vary from those proposed in this report when the final scope and budget are developed.

Establishing a Facility Condition Needs Index (FCNI) for each building

The FCA reports identify maintenance items and establish construction cost estimates. These costs are summarized at the end of the report and noted as construction costs per square foot. A FCNI is commonly used by facility managers to make a judgment whether to recommend whole replacement of facilities, rather than expending resources on major repairs and improvements. The FCNI is a ratio between the proposed facility upgrade costs and facility replacement costs (FRC). Those buildings with indices greater than .50 or 50% are recommended to be considered for complete replacement.

Class Definitions

**PRIORITY CLASS 1 - Currently Critical (Immediate to Two Years)**

Projects in this category require immediate action to return a facility to normal operation, stop accelerated deterioration, correct a fire/life safety hazard, or correct an ADA requirement.

**PRIORITY CLASS 2 - Necessary - Not Yet Critical (Two to Four Years)**

Projects in this category include conditions requiring appropriate attention to preclude predictable deterioration or potential downtime and the associated damage or higher costs if deferred further.

**PRIORITY CLASS 3 - (Four to Ten Years)**

Projects in this category include items that represent a sensible improvement to existing conditions. These items are not required for the most basic function of a facility; however, Priority 3 projects will either improve overall usability and/or reduce long-term maintenance.

The Caliente Youth Center Site is located just north of the City of Caliente and the site encompasses about 35 acres with about 10 acres devoted to the buildings and their associated use. Water and sewer service is provided by the City of Caliente and electrical power is supplied by the Lincoln County Power District. There are large grassy areas for outdoor activities, two main paved parking areas with ADA accessible parking, a paved access road to the culinary and maintenance buildings and concrete sidewalks connecting the occupied buildings on site. There is a well that is used primarily for irrigation and can also provide domestic water in emergency situations.

</tr>
</tbody>
</table>

**ADA PATH OF TRAVEL UPGRADES**

The ADA provides for accessibility to sites and services for people with physical limitations. A concrete parking area, passenger loading area and path of travel to the office are necessary to comply with ADA accessibility requirements. This project would provide for a concrete van accessible ADA parking and loading space and concrete walkway to the existing sidewalk. This will require regrading, placement of P.C. concrete, signage, striping and any other necessary upgrades. The 2012 IBC, ICC/ANSI A117.1 - 2009, NRS 338.180 and the most current version of the ADA Standards for Accessible Design were used as references for this project. 750 square feet of concrete was used for this estimate. It is recommended that this project coincide with the paving project.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**COMMUNICATIONS SYSTEM UPGRADE**

This facility is equipped with a communications system which has reached the end of its expected life. The telephone system has had numerous problems including a repeater that was destroyed in a windstorm in 2004. The emergency phones and intercom system have been inoperative since the early 1990's. The system provides paging and phone communications to classrooms and is an integral component of the notification and safety procedures for the classrooms. It is recommended that the entire communication systems be upgraded site wide.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**PRIORITY CLASS 2 PROJECTS**

</tr>
</thead>
<tbody>
<tr>
<td>9950SIT1</td>
<td>$156,250</td>
</tr>
</tbody>
</table>

**CRACK FILL & SEAL ASPHALT PAVING**

It is important to maintain the asphalt concrete paving on the site. This project would provide for minor crack filling and slurry sealing of the paving site wide including access roads, parking areas and the maintenance yard. Striping is included in this estimate. This project should be scheduled on a 5 year cyclical basis to maintain the integrity of the paving and prevent premature failure. 125,000 square feet of asphalt area was used to generate this estimate.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.
EXTERIOR SOLAR SITE LIGHTING INSTALLATION

There are two pole lights in the parking lot that have reached the end of their expected life and are not energy efficient. This project would provide for the installation of 4 solar powered LED exterior light fixtures, 20 foot tall poles and 30" diameter raised concrete bases. This installation will eliminate the need for trenching and electrical connections. It may be feasible to use the two existing poles and only change out the heads. The estimate should be adjusted accordingly. This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

Project Index #: 9950ENR1
Construction Cost $26,000

REPLACE IRRIGATION WATER MAIN

The grounds are irrigated via galvanized piping from the well. The piping is original to the site and is increasingly failing resulting in flooding. The age and type of the pipe makes it difficult to repair or replace. This project recommends replacing the existing water main with a Schedule 40 PVC or similar material, and the installation of a back-flow device to protect the well from cross contamination.
This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

Project Index #: 9950PLM1
Construction Cost $100,000

SECURITY SYSTEM INSTALLATION

The site does not have a security system. This project recommends motion detection, door switches, access control and related items be installed and interfaced with the fire alarm.

Project Index #: 9950SEC1
Construction Cost $640,430

**EXTERIOR FINISHES**

It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building excluding the roof. Included in the cost is sanding, priming and painting and caulking of the windows, flashing, fixtures and all other penetrations. It is recommended that the building be painted in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

Included in the cost is sanding, priming and painting and caulking of the windows, flashing, fixtures and all other penetrations. It is recommended that the building be painted in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

The CYC Industrial Arts Storage is a wood framed structure with a composition roofing system on a concrete slab-on-grade foundation.

**EXTERIOR FINISHES**

It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building excluding the roof. Included in the cost is sanding, priming and painting and caulking of the windows, flashing, fixtures and all other penetrations. It is recommended that the building be painted in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**ROOF REPLACEMENT**

The asphalt composition shingle roof on this building was in poor condition at the time of the survey. It is recommended that this building be re-roofed in the next 2-3 years with a new 50 year asphalt composition shingle roof and new underlayment. This estimate includes removal and disposal of the old roof. This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

The CYC Recreational Center is an insulated engineered structure with metal walls and a metal roofing system on a concrete slab-on-grade foundation which provides space for recreational activities. There are Men's and Women's designated ADA restrooms, a fire alarm with sprinklers and two exterior mounted HVAC packaged units.

**PRIORITY CLASS 1 PROJECTS**

**Currently Critical**

**Total Construction Cost for Priority 1 Projects:** $46,120

**Project Index #:** 2943ADA1

**Construction Cost:** $40,000

**ADA RESTROOM UPGRADE**

The building does not have an accessible restroom. The existing restroom does not meet the ADA requirements. A complete retrofit is necessary. This project would provide funding for remodeling the Men's and Women's restrooms per ADA regulations. Items may include a new sink, toilet, hardware, mirrors, fixtures, flooring and paint. The 2012 IBC, ICC/ANSI A117.1 - 2009, NRS 338.180 and the most current version of the ADA Standards For Accessible Design were used as references for this project.

**EXIT SIGN AND EGRESS LIGHTING UPGRADE**

The emergency egress lighting is insufficient and the exit signs do not meet current standards. This project would provide for the purchase and installation of self-illuminated or LED style exit signs with battery-backed internal systems as well as emergency egress lighting to provide illumination along the egress route. IBC 2012 Chapter 10 was referenced for this project.

**PRIORITY CLASS 2 PROJECTS**

**Necessary - Not Yet Critical**

**Total Construction Cost for Priority 2 Projects:** $62,700

**Project Index #:** 2943EXT1

**Construction Cost:** $30,600

**EXTERIOR FINishes**

It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building excluding the roof. Included in the cost is the caulking and sealing of the windows, flashing, fixtures and all other penetrations. It is recommended that the building be caulked and sealed in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**INTERIOR FINishes**

The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability. This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**OCCUPANCY SENSOR INSTALLATION**

There are no occupancy sensors installed in the restrooms to control lighting. It is recommended to install sensors in the Men's and Women's restrooms in order to reduce energy costs. This project provides for purchase and installation of 2 sensors.
WATER HEATER REPLACEMENT

There is a 20 gallon electric water heater in the building. The average life span of a water heater is eight to ten years. With the passage of time and constant use, this unit is showing signs of wear and should be scheduled for replacement in the next 2-3 years. It is recommended that a new electric water heater be installed. Removal and disposal of the existing equipment is included in this estimate.

PRIORITY CLASS 3 PROJECTS

<table>
<thead>
<tr>
<th>Project</th>
<th>Total Construction Cost for Priority 3 Projects:</th>
</tr>
</thead>
<tbody>
<tr>
<td>WATER HEATER REPLACEMENT</td>
<td>$1,000</td>
</tr>
<tr>
<td>HVAC EQUIPMENT REPLACEMENT</td>
<td>$40,000</td>

<td>$24,480</td>
</tr>
<tr>
<td>WINDOW REPLACEMENT</td>
<td>$30,000</td>
</tr>
</tbody>
</table>

Priorities:
- Class 3
- Four to Ten Years

HVAC EQUIPMENT REPLACEMENT

There are 2 packaged HVAC units that are original to the building and should be scheduled for replacement. They are not energy efficient and have reached the end of their expected and useful life. This project would provide for installation of new HVAC packaged units and cleaning of the existing duct work and grilles. This project includes removal and disposal of the existing HVAC units and all required connections to utilities.

LIGHTING UPGRADE

The existing lighting fixtures are the older fluorescent type, and are not energy efficient. This project will upgrade fixtures to higher efficiency units with a longer life cycle. 5,000K LED lamps, without the ballasts, are suggested, and new tombstones (if needed). Occupancy sensors will be installed in low occupancy areas for additional savings. Any electrical wiring upgrades are not included in this estimate.

WINDOW REPLACEMENT

The windows are original, double pane construction in metal frames. These older windows are drafty and not energy efficient. This project recommends replacing the windows with dual pane, higher efficiency units. This estimate is for the replacement of 20 units. Removal and disposal of the existing windows is included in this estimate.
The CYC Maintenance Building is an insulated engineered steel structure on a concrete slab-on-grade foundation. It has a storage area as well as vehicle bays with overhead coiling doors which provides indoor space for maintenance and servicing of equipment. The building has two small ceiling mounted heating units.

### PRIORITY CLASS 1 PROJECTS

**Total Construction Cost for Priority 1 Projects:** $55,800

#### ADA RESTROOM UPGRADE

**Project Index #: 2168ADA1**

**Construction Cost:** $25,000

The men's and women's designated ADA restrooms do not meet the ADA requirements. A complete retrofit is necessary. This project would provide funding for construction of two unisex accessible restrooms. These items may include a new sink, toilet, hardware, mirrors, fixtures, flooring and paint. The 2012 IBC, ICC/ANSI A117.1 - 2009, NRS 338.180 and the most current version of the ADA Standards for Accessible Design were used as references for this project.

#### EXIT SIGN AND EGRESS LIGHTING UPGRADE

**Project Index #: 2168SFT1**

**Construction Cost:** $6,000

The emergency egress lighting is insufficient and the exit signs do not meet current standards. This project would provide for the purchase and installation of self-illuminated or LED style exit signs with battery-backed internal systems as well as emergency egress lighting to provide illumination along the egress route. IBC 2012 Chapter 10 was referenced for this project.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

#### FIRE ALARM SYSTEM INSTALLATION

**Project Index #: 2168SFT2**

**Construction Cost:** $24,000

This building is lacking a fire detection and alarm system. It is recommended that a fire detection and alarm system be installed. When completed, the new system will provide visual, as well as audible notification, in accordance with ADA requirements located in ICC/ANSI A117.1- 2009 Section 7 and the 2012 International Fire Code.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

#### OSHA COMPLIANT LADDER

**Project Index #: 2168SFT4**

**Construction Cost:** $800

The ladder in the building was constructed in-house and does not comply with OSHA guidelines. This project recommends an OSHA compliant ladder per OSHA 1926.1053 for the interior of the building.

### PRIORITY CLASS 2 PROJECTS

**Total Construction Cost for Priority 2 Projects:** $205,900

#### EXTERIOR FINISHES

**Project Index #: 2168EXT1**

**Construction Cost:** $60,000

It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building excluding the roof. Included in the cost is the caulking and sealing of the windows, flashing, fixtures and all other penetrations. It is recommended that the building be caulked and sealed in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.
HVAC EQUIPMENT UPGRADE

The existing HVAC system consists of ceiling mounted electric heaters and does not have any cooling equipment. The electricity powered heaters are inefficient and should be replaced with propane fired heaters. There is a need for cooling equipment as well to provide a comfortable work environment in the summer. This project would provide for replacing the existing heaters with exterior ground mounted packaged units that provide propane fired heating as well as air conditioning. Propane gas service will be required and is included in the cost.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

Construction Cost: $35,000

Project Index #: 2168ENR2

INTERIOR FINISHES

The interior finishes are in fair condition. About one quarter of the interior has finished gypsum board walls. It is recommended that the interior finished walls be painted at least once in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and prepped.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

Construction Cost: $60,000

Project Index #: 2168INT1

JANITORS CLOSET REPAIRS

The mop sink in the Janitors Closet is mounted adjacent to gypsum board and is showing signs of water damage. This project would provide FRP to be installed on the walls adjacent to the mop sink. The FRP shall extend two feet beyond the edge of the sink and a minimum of 54" above the floor finish.

Construction Cost: $1,400

Project Index #: 2168INT2

LIGHTING UPGRADE

The existing lighting fixtures are the older fluorescent type, and are not energy efficient. This project will upgrade fixtures to higher efficiency units with a longer life cycle. 5,000K LED lamps, without the ballasts, are suggested, and new tombstones (if needed). Occupancy sensors will be installed in low occupancy areas for additional savings. Any electrical wiring upgrades are not included in this estimate.

Construction Cost: $48,000

Project Index #: 2168ENR3

WINDOW REPLACEMENT

The windows are original, single pane construction in a metal frame. These older windows are drafty and not energy efficient. This project recommends replacing the windows with dual pane, higher efficiency units. This estimate is for the replacement of 2 units. Removal and disposal of the existing windows is included in this estimate.

Construction Cost: $1,500

Project Index #: 2168ENR1

BUILDING INFORMATION:

Priority Class 1: $55,800 Project Construction Cost per Square Foot: $43.62
Priority Class 2: $205,900 Total Facility Replacement Construction Cost: $900,000
Priority Class 3: $0 Facility Replacement Cost per Square Foot: $150
Grand Total: $261,700 FCNI: 29%

10-Mar-21
The CYC Generator Building is a concrete masonry unit and steel framed structure with a single-ply roofing system and has a concrete slab-on-grade foundation. It has a 900 KVA diesel powered generator inside along with automatic switch gear which will power the entire facility in the event of a power outage. The main switchgear for the site is located adjacent to the building.

**PRIORITRY CLASS 2 PROJECTS**

**Total Construction Cost for Priority 2 Projects:** $19,150

**Necessary - Not Yet Critical**

**Two to Four Years**

**Project Index #:** 2166ELE2

**Electrical Panel Unused Openings**

The wiring in the electrical panel has missing breakers and needs to have blanks installed at the unused openings. Per NEC 408.7 Unused Openings. Unused openings for circuit breakers and switches shall be closed using identified closures, or other approved means that provide protection substantially equivalent to the wall of the enclosure. Unused openings create a safety issue during repairs or upgrades. This project would provide for blanks to be installed where the missing breakers are located.

**Construction Cost** $250

**Project Index #:** 2166EXT2

**Exterior Door Replacement**

The exterior metal doors are damaged from age and general wear and tear and have reached the end of their expected life. This project would provide for the replacement of the double door assembly with new metal doors, frame and hardware. Removal and disposal of the existing doors is included in this estimate.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**Construction Cost** $3,000

**Project Index #:** 2166EXT1

**Exterior Finishes**

It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building excluding the roof. Included in the cost is painting the concrete masonry unit walls and caulking of the vents, flashing, fixtures and all other penetrations. It is recommended that the building be painted and caulked in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**Construction Cost** $3,000

**Project Index #:** 2166SFT1

**Exterior Landing Installation**

There are two out-swinging exterior doors on the building. These doors swing out over a step that does not have a landing. This does not comply with 2012 IBC Section 1008.1 which requires a proper landing and for the landing to not be more than 1/2" below the threshold. This project would provide for the installation of compliant landings.

**Construction Cost** $5,000

**Project Index #:** 2166ELE1

**GFCI Outlets**

The existing receptacle on the outside of the building is a standard duplex receptacle. The 2011 NEC 210.8 requires these locations to have GFCI protection. This project would provide for removing the standard receptacles and installing GFCI receptacles.

**Construction Cost** $400

**Project Index #:**
INTERIOR FINISHES

The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and prepped.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

ROOF REPLACEMENT

The roof on this building was in fair condition at the time of the survey. The statewide roofing program has set the useful life of an average roof at 20 years. The roof warranty expires at the end of the same time frame. The temperature fluctuations throughout the year, consistent wind which blows sand and dirt on to the roof membrane, and constant exposure to the sun are contributing factors to wear and deterioration. The current roofing system was installed in 1994.

It is recommended that this building be re-roofed in the next 2-3 years to be consistent with the roofing program and the end of the warranty period.

ADA RESTROOM UPGRADE

The building does not have an accessible restroom. The existing restroom does not meet the ADA requirements. A complete retrofit is necessary. This project would provide funding for remodeling the Men's and Women's restrooms per ADA regulations. Items may include a new sink, toilet, hardware, mirrors, fixtures, flooring and paint. The 2012 IBC, ICC/ANSI A117.1 - 2009, NRS 338.180 and the most current version of the ADA Standards for Accessible Design were used as references for this project.

ADA SIGNAGE

ADA regulations pertaining to building access has established building signage criteria for permanent spaces in buildings. The criteria includes: sign mounting heights and locations; character heights and proportions; raised and Braille characters/pictograms; and sign contrast and finish. The signage in this facility does not comply with these criteria.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

ADA UPGRADES

The building does not have a designated accessible office and the door handles are not compliant with the ADA. This project would provide for an accessible office area, path of travel throughout the building and ADA compliant lever action door hardware. NRS 338.180, IBC - 2012, ICC/ANSI A117.1 - 2009 and the most current version of the ADAAG were used as references for this project.

BREAK ROOM REMODEL

The kitchenette and associated cabinets in the employee break room are original to the building. The quality of construction and installation were inadequate for the high usage at this facility, and the cabinets and countertops are delaminating and failing. This project recommends the replacement of the existing kitchen countertops, cabinets, and associated equipment with heavy duty, quality components. The cabinets should be finished inside and outside with a melamine or similar finish which encapsulates the door, frame, and shelving. The countertops should be constructed of a highly durable product, such as stainless steel, over a moisture resistant underlayment to minimize swelling and damage from water exposure. ADA compliance according to NRS 338.180, IBC - 2012, ICC/ANSI A117.1 - 2009 and the most current version of the ADA Standards for Accessible Design should be incorporated into the design such as providing an accessible sink. This estimate includes removal and disposal of the existing materials.
EXIT SIGN AND EGRESS LIGHTING INSTALLATION
The building does not have emergency lighting and the exit signs do not meet current standards. This project would provide for the purchase and installation of self-illuminated or LED style exit signs with battery-backed internal systems as well as emergency egress lighting to provide illumination along the egress route. IBC 2012 Chapter 10 was referenced for this project.

FIRE SUPPRESSION OBSTRUCTION INVESTIGATION
This building has an automatic fire suppression system. Per NFPA 25 Obstruction Investigation and Prevention an inspection of piping and branch line conditions shall be conducted every 5 years by opening a flushing connection at the end of one main and by removing a sprinkler toward the end of one branch line for the purpose of inspecting for the presence of foreign organic and inorganic material. It is recommended that this project be completed within the next year and that this project be scheduled on a cyclical basis to maintain the integrity of the structure.

HVAC EQUIPMENT REPLACEMENT
The HVAC roof top units were installed in 1994. They are not energy efficient and have reached the end of their expected and useful life. This project would provide for installation of new HVAC packaged units and cleaning of the existing duct work and grilles. This project includes removal and disposal of the existing equipment and all required connections to utilities.

PANIC HARDWARE IN ELECTRICAL ROOMS
The electrical room with the uninterruptable power supply contains equipment that meets or exceeds 1,200 amps. It is recommended per the 2012 IBC 1008.1.10 that panic and fire exit hardware be installed. This equipment was not required at the time the building was built in 1994, but is suggested in this report as an increased safety measure. It is recommended that this project be completed within 1-2 years. The estimate is based on one door that requires panic hardware.

PRIORITY CLASS 2 PROJECTS
Total Construction Cost for Priority 2 Projects: $720,000

Necessary - Not Yet Critical Two to Four Years

AIR CONDITIONER INSTALLATION
The server room is not sufficiently cooled by the existing HVAC system. If the room is too warm, the computer equipment will prematurely age and may fail due to overheating. It is recommended to install an air conditioning system in the room to ensure that the temperature is properly regulated. This project would provide for the purchase and installation of an air conditioner including all required connections to existing utilities.

EXHAUST FAN REPLACEMENT
Many of the exhaust fans in the restrooms areas were inoperative and/or damaged at the time of the survey. Due to building code requirements, this project would provide funding for the purchase and installation of high volume commercial exhaust fans.

EXTERIOR DOOR REPLACEMENT
The existing exterior metal doors and frames appear to be original to the building. They are damaged from age and general wear and tear. This project would provide for the replacement and installation of eight new metal doors, frames and hardware. Removal and disposal of the existing doors and painting of the new doors is included in this estimate.
EXTERIOR FINISHES
It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building excluding the roof. Included in the cost is power washing, priming and painting and caulking of the windows, flashing, fixtures and all other penetrations. Repairs to the damaged EIFS on the south side of the building should be completed as soon as possible to prevent further damage to the structure. It is recommended that the building be painted and repaired in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

Construction Cost: $220,000

EXTERIOR LANDING INSTALLATION
There are two out-swinging exterior doors on the building. These doors swing out over a step that does not have a landing. This does not comply with 2012 IBC Section 1008.1 which requires a proper landing and for the landing to not be more than 1/2" below the threshold. This project would provide for the installation of compliant landings.

Construction Cost: $10,000

INTERIOR FINISHES
The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability. This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

Construction Cost: $220,000

LIGHTING UPGRADE
The existing lighting fixtures are the older fluorescent type, and are not energy efficient. This project will upgrade fixtures to higher efficiency units with a longer life cycle. 5,000K LED lamps, without the ballasts, are suggested, and new tombstones (if needed). Occupancy sensors will be installed in low occupancy areas for additional savings. Any electrical wiring upgrades are not included in this estimate.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

Construction Cost: $176,000

OVERHEAD DOOR REPLACEMENT
There is an 8'x8' overhead coiling door on the building which is damaged and does not function properly. It is original to the building and should be scheduled for replacement. This project would provide for the removal and disposal of the manually operated overhead coiling door and replacement with a new manually operated overhead coiling door. Removal and disposal of the existing door is included in this estimate.

Construction Cost: $7,000

SINK INSTALLATION
The classroom that teaches silk screening does not have a sink or an area to clean up after the silk screening activities. This project recommends installing a new sink with plumbing for the use and cleanup of the silk screening functions.

Construction Cost: $10,000

SITE DRAINAGE UPGRADES
The grade does not slope away effectively from the buildings. Water has pooled against the foundation. In the winter months, as the water freezes against the foundation, over time, this can cause damage to the foundation. It is recommended per IBC 1804.3 Site Grading the ground immediately adjacent to the foundation shall be sloped away from the building at a slope of not less than one vertical in 20 units horizontal (5-percent slope) for a minimum distance of 10 feet (3048 mm) measured perpendicular to the face of the wall. This project would create a 5% slope away from the buildings. Additional drainage swales shall be installed, as needed. It is recommended that the grading be completed within 2-3 years.
WATER HEATER REPLACEMENT

There is a 119 gallon electric water heater in the building. The average life span of a water heater is eight to ten years. With the passage of time and constant use, this unit is showing signs of wear and should be scheduled for replacement in the next 2-3 years. It is missing proper seismic bracing and an expansion tank. It is recommended that a new electric water heater be installed. Removal and disposal of the existing equipment is included in this estimate.

Construction Cost: $5,000

Project Index #: 2001PLM1

WINDOW REPLACEMENT

The windows are original, double pane construction in metal frames. These older windows are drafty and not energy efficient. This project recommends replacing the windows with dual pane, higher efficiency units. This estimate is for the replacement of 8 units. Removal and disposal of the existing windows is included in this estimate.

Construction Cost: $12,000

Project Index #: 2001EXT5

BUILDING INFORMATION:

The CYC Ramada is a steel post/beam and wood framed structure with a composition roofing system on a concrete slab-on-grade foundation. It has a concrete barbeque.

PRIORITY CLASS 1 PROJECTS

Currently Critical

Immediate to Two Years

Total Construction Cost for Priority 1 Projects: $2,500

DEMOLOISH STRUCTURE

The structure is built of steel posts and beams, a wood framed roof structure and a concrete slab-on-grade foundation. All of these structural elements are showing signs of failing and the structure should be removed. This project provides for the demolition of the structure, including the foundation and disposal of the materials.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**DUAL LEVEL DRINKING FOUNTAIN INSTALLATION**

This building contains a water fountain that is not ADA compliant. The 2012 IBC Section 1109.5 states where drinking fountains are provided on an exterior site, on a floor or within a secured area, no fewer than two drinking fountains shall be provided. One shall comply with the requirements for people who use a wheelchair and one shall comply with the requirements for standing persons. This project would provide funding for the purchase and installation of two drinking fountains to meet the ADA requirements.

| Project Index #: 0292SFT4 | Construction Cost $2,000 |

**HAZARDOUS COMMUNICATION PROGRAM**

Due to the storage of hazardous materials, this site shall comply with IFC 2012 Chapter 4 Emergency Planning and Preparedness, and have a written Hazardous Materials Management Plan, including but not limited to, Section 5003 Safety Data Sheets, Section 406 Employee Training and Response Procedures and Section 407 Hazard Communication. Chapter 50 Section 5001 will provide additional assistance in devising and implementing a hazardous communication program.

| Project Index #: 0292SFT3 | Construction Cost $30,000 |

**HAZARDOUS MATERIALS STORAGE**

The building contains hazardous materials (i.e. pool chemicals). Per IFC 2012 Hazardous Materials, and in accordance with NFPA; where hazardous materials are stored, dispensed or used, Section 5003 states the proper use and application is to have mechanical exhaust and ventilation, and hazard identification signs shall be installed. Refer to Section 5004 and 5005 for the proper use and setup. It is important to comply with all applicable codes. This project would provide for all requirements in IFC 2012, to include Section 105 permits and inspections through the State Fire Marshal’s Office and the State Public Works Division.

| Project Index #: 0292ADA1 | Construction Cost $40,000 |

**RESTROOM REMODEL**

The showers and restroom facilities are damaged from wear and tear, not operational and do not meet the ADA requirements. A complete retrofit is necessary. This project would provide funding for remodeling the restrooms and constructing an accessible shower and restroom. These items may include a new shower stall, sink, toilet, hardware, mirrors, fixtures, flooring and paint. NRS 338.180, IBC 2012, ICC/ANSI A117.1 – 2009 and the most current version of the ADAAG were used as references for this project.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

| Project Index #: 0292SFT2 | Construction Cost $5,000 |

**SAFETY CABINETS**

The building contains pool chemicals and other hazardous products located on open shelves and on the floor. This does not meet OSHA standards or IFC for hazardous materials containment. This project would provide a self-closing hazardous storage container in the building and install placards on the building’s exterior in accordance with OSHA 1910.106 (d) and IFC Chapter 57 Section 5704.3.2.1.3.
WATER HEATER REPLACEMENT

Project Index #: 0292PLM3
Construction Cost $2,500

There is a 75 gallon propane water heater in the building. The average lifespan of a water heater is eight to ten years. It is recommended that a new propane water heater, seismic straps, braided steel hose, expansion tank, ball valves, new flex gas line and pan be installed. Removal and disposal of the existing equipment is included in this estimate. This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

PRIORITY CLASS 2 PROJECTS

Total Construction Cost for Priority 2 Projects: $77,000

EXTERIOR DOOR REPLACEMENT

Project Index #: 0292EXT4
Construction Cost $3,000

The exterior metal doors are damaged from age and general wear and tear and have reached the end of their expected life. This project would provide for the replacement of the south double door assembly and the north single door assembly with new metal doors, frames and hardware. Removal and disposal of the existing doors is included in this estimate.

EXTERIOR FINISHES

Project Index #: 0292EXT2
Construction Cost $20,000

It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building excluding the roof. Included in the cost is painting the concrete masonry unit walls and caulking of the windows, flashing, fixtures and all other penetrations. It is recommended that the building be painted and caulked in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

FLUE REPLACEMENT

Project Index #: 0292SFT1
Construction Cost $4,000

There is a flue vent in the building which does not comply with UMC 2012 chapter 8, chimneys and vents. The flue vent was installed with an improper flue and per section 804 direct vent terminations vent terminals direct vented appliances shall be installed in accordance with the manufacturer’s installation instructions. The flue vent is taped and does not allow for the proper air flow. It is recommended that the flue vent be replaced per UMC and the manufacturer’s instructions. This project would provide funding to replace the flue vent.

INTERIOR FINISHES

Project Index #: 0292INT1
Construction Cost $20,000

The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

LIGHTING UPGRADE

Project Index #: 0292ENR1
Construction Cost $16,000

The existing lighting fixtures are the older fluorescent type, and are not energy efficient. This project will upgrade fixtures to higher efficiency units with a longer life cycle. 5,000K LED lamps, without the ballasts, are suggested, and new tombstones (if needed). Occupancy sensors will be installed in low occupancy areas for additional savings. Any electrical wiring upgrades are not included in this estimate.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.
POOL EQUIPMENT REPLACEMENT

The existing pool circulation pump, water filter, heater, chemical feeder, clocks and plumbing were in poor condition at the time of the survey. The pool equipment is beyond its useful life expectancy. This project would provide for the purchase and installation of new pool equipment and all required connections to utilities. This project would also provide for a chemical treatment program to include an updated chemical control system, service and employee training to be provided by a qualified water treatment vendor. The annual maintenance fee charged by the water treatment vendor would be determined after an investigation of the water system is complete. These annual costs are not included in this project cost. For budgeting purposes, a $12,000 fee is suggested.

**ADA ACCESSIBILITY IMPROVEMENTS**

The existing building is in need of an ADA accessibility upgrade. This project would provide for new lever action door hardware throughout, modifications to dining and serving tables and counters in the culinary and dining areas and modifications to the existing Men's and Women's restrooms which are used by the public during special events. The locker rooms in the Gym are also included in this estimate. NRS 338.180, IBC - 2012, ICC/ANSI A117.1 - 2009 and the most current version of the ADAAG were used as references for this project. This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**Project Index #: 0221ADA5 Construction Cost: $100,000**

**ADA SIGNAGE**

ADA regulations pertaining to building access has established building signage criteria for permanent spaces in buildings. The criteria includes: sign mounting heights and locations; character heights and proportions; raised and Braille characters/pictograms; and sign contrast and finish. The signage in this facility does not comply with these criteria. It is recommended that applicable signage be installed where required. NRS 338.180, IBC - 2012, ICC/ANSI A117.1 - 2009 and the most current version of the ADAAG were used as references for this project. This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**Project Index #: 0221ADA3 Construction Cost: $8,000**

**ADA UPGRADES - STAGE**

The auditorium is lacking an accessible path to the stage. The stage is required to have an accessible path to it per the ADA regulations. This project would provide for an accessible ramp or powered lift to access the stage. NRS 338.180, IBC - 2012, ICC/ANSI A117.1 - 2009 and the most current version of the ADAAG were used as references for this project. This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**Project Index #: 0221ADA4 Construction Cost: $7,500**

**ANCHOR SHELVES**

OSHA recommends that the bottom of all columns be furnished with column base plates, and be anchored to the floor with anchor bolts capable of resisting the forces caused by the loads on the shelving unit. Per OSHA standard 1926.250(a)(1) All materials stored in tiers shall be stacked, racked, blocked, interlocked, or otherwise secured to prevent sliding, falling or collapse. This project would provide for a licensed contractor to install anchor bolts and properly secure the shelving units to the floor and to the other shelves. This project should be overseen by a license engineer or architect.

**Project Index #: 0221SFT4 Construction Cost: $10,000**
DUAL LEVEL DRINKING FOUNTAIN INSTALLATION

This building contains a water fountain that is not ADA compliant. The 2012 IBC Section 1109.5 states where drinking fountains are provided on an exterior site, on a floor or within a secured area, no fewer than two drinking fountains shall be provided. One shall comply with the requirements for people who use a wheelchair and one shall comply with the requirements for standing persons. This project would provide funding for the purchase and installation of two drinking fountains to meet the ADA requirements.

FIRE ALARM SYSTEM UPGRADE

This building is equipped with an automatic fire detection and alarm system that no longer complies with current requirements. It is recommended that the system be upgraded to current requirements to ensure the safety of the occupants. Also, according to NAC 477.917 "If the value of individual or cumulative additions, alterations and repairs to a building or structure in any 12-month period exceeds 50 percent of the value of the building or structure at the commencement of the 12-month period, the building or structure must conform to the requirements for a new building or structure". When completed, the new system will provide visual, as well as audible notification, in accordance with the 2012 IBC Chapter 9, Section 907 and the State Fire Marshal's requirements.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

WATER HEATER REPLACEMENT

There are two 120 gallon electric water heaters in the building. The average lifespan of a water heater is eight to ten years. It is recommended that 2 new electric water heaters, seismic straps, braided steel hose, expansion tanks, ball valves and pans be installed within a year. Removal and disposal of the existing equipment is included in this estimate.

PRIORITY CLASS 2 PROJECTS

Total Construction Cost for Priority 2 Projects: $3,552,164

Necessary - Not Yet Critical  Two to Four Years

CULINARY EQUIPMENT REPLACEMENT

The kitchen equipment is original to the building and has reached the end of its useful life. It is recommended that the equipment be scheduled for replacement in the next 2-3 years, including the ovens and hoods, grills, sinks and dishwashers. This project provides for the removal and disposal of the existing equipment and replacement with new equipment.

EXTerior FINISHES

It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building excluding the roof. Included in the cost is painting the stucco and concrete masonry unit walls and caulking of the windows, flashing, fixtures and all other penetrations. It is recommended that the building be painted and caulked in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

FLOORING REPLACEMENT

The VCT and carpet in the building are damaged and reaching the end of their useful life. It is recommended that the flooring be replaced. This project would provide for removal and disposal of the existing flooring and installation of new 12x12 VCT with a 6" base and heavy duty commercial grade carpet in the next 2-3 years. The gymnasium and concrete floors are excluded from the square footage.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.
HVAC SYSTEM UPGRADE
The HVAC system consists of many roof mounted packaged units, boilers and evaporative coolers. They are not energy efficient and have reached the end of their expected and useful life. The air handlers are troublesome and require constant maintenance to remain in working condition. This project would provide for installation of a new HVAC system and cleaning of the existing duct work and grilles and any new ducting and associated work. The new system should be designed by a mechanical engineer who will determine the most economical and efficient way to upgrade the existing building. This project includes removal and disposal of the existing HVAC units and all required connections to utilities. This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

ICE MACHINE REPLACEMENT
There is an ice machine in the dining room. This unit is showing signs of wear including extensive leaks which are ruin the flooring and should be scheduled for replacement in the next 2-3 years. It is recommended that a new ice machine be purchased and installed. Removal and disposal of the existing machine is included in this estimate. This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

INTERIOR FINISHES
The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability. This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

JANITORS CLOSET REPAIRS
The mop sink in the Janitors Closet is mounted adjacent to gypsum board and is showing signs of water damage. This project would provide FRP to be installed on the walls adjacent to the mop sink. The FRP shall extend two feet beyond the edge of the sink and a minimum of 54" above the floor finish.

LIGHTING UPGRADE
The existing lighting fixtures are the older fluorescent type, and are not energy efficient. This project will upgrade fixtures to higher efficiency units with a longer life cycle. 5,000K LED lamps, without the ballasts, are suggested, and new tombstones (if needed). Occupancy sensors will be installed in low occupancy areas for additional savings. Any electrical wiring upgrades are not included in this estimate.

WATER TREATMENT SYSTEM INSTALLATION
The existing water softening/ treatment system in the building only serves the boiler for the Laundry and Culinary. The other boiler and the rest of the HVAC equipment should have a water treatment system as well. Failure to treat the water can cause wear and tear on the domestic water supply lines, plumbing fixtures and HVAC equipment. This project would provide for the purchase and installation of water softeners/ treatment systems to serve all of the mechanical and plumbing equipment. This project would also provide for a chemical treatment program including an updated chemicals control system, service and employee training provided by a qualified water treatment vendor for the HVAC systems. The annual maintenance fee charged by the water treatment vendor would be determined after an investigation of the water system is complete. These annual costs are not included in this project cost. For budgeting purposes, a $12,000 fee is suggested. This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.
WIRING CLEANUP

The building has wiring that is disorganized and not in proper electrical boxes, particularly in the near the stage area. This creates a safety issue during repairs or upgrades. This project would provide for organization, proper labeling and for the wiring to be placed in electrical boxes per NEC 2011.

Total Construction Cost for Priority 1 Projects: $69,686

**Currently Critical**

**Immediate to Two Years**
INSTALL LEVER ACTION DOOR HARDWARE

The existing door handles are round knob type and are not ADA compliant. This project would provide for the installation of new lever action door hardware on all doors in the facility. This estimate is for 15 units. NRS 338.180, IBC - 2012, ICC/ANSI A117.1 - 2009 and the most current version of the ADAAG were used as references for this project.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

Project Index #: 0220ADA5
Construction Cost $5,250

LIGHTING UPGRADE

The existing lighting fixtures are the older fluorescent type, and are not energy efficient. This project will upgrade fixtures to higher efficiency units with a longer life cycle. 5,000K LED lamps, without the ballasts, are suggested and new tombstones (if needed). Occupancy sensors will be installed in low occupancy areas for additional savings. Any electrical wiring upgrades are not included in this estimate.

Project Index #: 0220ENR4
Construction Cost $12,624

PRIORITY CLASS 2 PROJECTS

Total Construction Cost for Priority 2 Projects: $62,960

Necessary - Not Yet Critical Two to Four Years

EXTERIOR FINISHES

It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building excluding the roof. Included in the cost are painting the concrete masonry unit walls and caulking of the windows, flashing, fixtures and all other penetrations. It is recommended that the building be painted and caulked in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

Project Index #: 0220EXT1
Construction Cost $15,780

HVAC EQUIPMENT REPAIRS

There are two HVAC split systems that were installed in 2015. Both of the systems have ductwork, line sets, A/C condenser and heaters installed improperly. This project would provide for the proper installation of both HVAC split systems. This project includes removal and installation of the existing equipment and all required connections to utilities.

Project Index #: 0220HVA1
Construction Cost $6,000

INTERIOR FINISHES

The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability. This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

Project Index #: 0220INT2
Construction Cost $15,780

JANITORS CLOSET REPAIRS

The mop sink in the Janitors Closet is mounted adjacent to gypsum board and is showing signs of water damage. This project would provide FRP to be installed on the walls adjacent to the mop sink. The FRP shall extend two feet beyond the edge of the sink and a minimum of 54” above the floor finish.

Project Index #: 0220INT3
Construction Cost $1,400

WATER HEATER REPLACEMENT

There are 3 on-demand propane-fired water heaters on the roof of the building. The average life span of a water heater is eight to ten years. With the passage of time and constant use, these units are showing signs of wear and should be scheduled for replacement in the next 2-3 years. It is recommended that 3 new on-demand propane-fired water heaters be installed. Removal and disposal of the existing equipment is included in this estimate.

Project Index #: 0220PLM1
Construction Cost $7,500
WINDOW REPLACEMENT

The windows are original, single pane construction in a metal frame. These older windows are drafty and not energy efficient. This project recommends replacing the windows with dual pane, higher efficiency units. This estimate is for the replacement of 11 units. Removal and disposal of the existing windows is included in this estimate.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

BUILDING INFORMATION:

- Gross Area (square feet): 1,578

- Facility Replacement Cost per Square Foot: $275
- FCNI: 31%
CYC SCHOOL - OLD
BUILDING REPORT

The CYC School - Old is a concrete masonry unit and wood framed structure with a single-ply roofing system on a concrete slab-on-grade foundation. It contains a library, classrooms with individual restrooms, storage areas, a culinary/kitchen classroom and offices. There are 5 roof mounted packaged HVAC units and an evaporative cooler which provides heating and cooling. The building is equipped with a fire alarm system.

PRIORITY CLASS 1 PROJECTS

Total Construction Cost for Priority 1 Projects: $152,200

Currently Critical

Immediate to Two Years

**ADA ACCESSIBLE COUNTER**

The ADA provides for accessibility to sites and services for people with physical limitations. The entrance of the building has a service counter for the public to approach which does not meet current requirements. Section 904.4 of the ADA Standards for Accessible Design states that a portion of the counter surface that is 36" long minimum and 36" high maximum above the finish floor shall be provided. This project will provide an accessible counter space in accordance with this requirement. The 2012 IBC, ICC/ANSI A117.1 - 2009, NRS 338.180 and the most current version of the ADA Standards for Accessible Design were used as a references for this project.

**Project Index #: 0219ADA5**

**Construction Cost**: $4,000

---

**ADA RESTROOM UPGRADE**

The building does not have an accessible restroom. The existing restroom does not meet the ADA requirements. A complete retrofit is necessary. This project would provide funding for remodeling the Men's and Women's restrooms per ADA regulations. Items may include a new sink, toilet, hardware, mirrors, fixtures, flooring and paint. The 2012 IBC, ICC/ANSI A117.1 - 2009, NRS 338.180 and the most current version of the ADA Standards for Accessible Design were used as references for this project.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**Project Index #: 0219ADA1**

**Construction Cost**: $40,000

---

**ADA SIGNAGE**

ADA regulations pertaining to building access has established building signage criteria for permanent spaces in buildings. The criteria includes: sign mounting heights and locations; character heights and proportions; raised and Braille characters/pictograms; and sign contrast and finish. The signage in this facility does not comply with these criteria. It is recommended that applicable signage be installed where required. The 2012 IBC, ICC/ANSI A117.1 - 2009, NRS 338.180 and the most current version of the ADA Standards for Accessible Design were used as references for this project.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**Project Index #: 0219ADA4**

**Construction Cost**: $5,000

---

**DUAL LEVEL DRINKING FOUNTAIN INSTALLATION**

This building contains a water fountain. The 2012 IBC Section 1109.5 states where a water fountain is provided, at least half should be accessible. This project would provide funding for the purchase and installation of a new accessible fixed high/low ADA drinking fountain.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**Project Index #: 0219ADA2**

**Construction Cost**: $4,000
EXIT SIGN AND EGRESS LIGHTING UPGRADE

The emergency egress lighting is insufficient and the exit signs do not meet current standards. This project would provide for the purchase and installation of self-illuminated or LED style exit signs with battery-backed internal systems as well as emergency egress lighting to provide illumination along the egress route. IBC 2012 Chapter 10 was referenced for this project.

Project Index #: 0219SFT4
Construction Cost $11,760

FIRE ALARM SYSTEM UPGRADE

This building is equipped with an automatic fire detection and alarm system that no longer complies with current requirements. The current system is problematic and the duct detectors were rendered inoperative in a previous remodel. It is recommended that the system be upgraded to current requirements to ensure the safety of the occupants. Also, according to NAC 477.917 "If the value of individual or cumulative additions, alterations and repairs to a building or structure in any 12-month period exceeds 50 percent of the value of the building or structure at the commencement of the 12-month period, the building or structure must conform to the requirements for a new building or structure". When completed, the new system will provide visual, as well as audible notification, in accordance with the 2012 IBC Chapter 9, Section 907 and the State Fire Marshal's requirements.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

Project Index #: 0219SFT3
Construction Cost $47,040

NONABSORBENT FINISHES

2012 IBC Section 1210 requires the installation of smooth, hard, nonabsorbent surfaces in the following restroom areas: on floors in toilet and bathing rooms that extend upward onto the walls at least 6 inches, within 2 feet of the sides of urinals and water closets to a height of 4 feet above the floor and in shower compartments to a height not less than 70 inches above the drain inlet. This project recommends the installation of FRP or an equal material in all 8 restroom facilities to comply with this code section.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

Project Index #: 0219ENV1
Construction Cost $27,000

PANIC HARDWARE IN ELECTRICAL ROOMS

The electrical room with the uninterruptable power supply contains equipment that meets or exceeds 1,200 amps. It is recommended per the 2012 IBC 1008.1.10 that panic and fire exit hardware be installed. This equipment was not required when the building was constructed in 1962. When a remodel occurs, it is suggested to comply with current code. It is recommended that this project be completed within 1-2 years. The estimate is based on one door that requires panic hardware.

Project Index #: 0219ELE3
Construction Cost $3,000

PROVIDE CLEARANCE AT ELECTRICAL PANELS

There are electrical panels in the building which do not have proper clear floor space around them. The 2012 IFC Section 605.3 states that, "A working space of not less than 30 inches in width, 36 inches in depth and 78 inches in height shall be provided in front of electrical service equipment. Where the electrical service equipment is wider than 30 inches, the working space shall not be less than the width of the equipment. No storage of any materials shall be located within the designated working space." This project would provide funds to relocate the stored materials blocking the working space.

Project Index #: 0219ELE1
Construction Cost $400

WATER HEATER REPLACEMENT

There is a 300 gallon electric water heater in the building. The average life span of a water heater is eight to ten years. With the passage of time and constant use, this unit is showing signs of wear and should be scheduled for replacement in the next year. It is recommended that a new electric water heater be installed. Removal and disposal of the existing equipment is included in this estimate.

Project Index #: 0219PLM2
Construction Cost $10,000
PRIORITY CLASS 2 PROJECTS

Necessary - Not Yet Critical Two to Four Years

**ELECTRICAL UPGRADE**

This building was constructed before the high demand for electrical services were needed. As time has progressed, the building’s electrical demand and system has changed. It is utilized to its current maximum potential. The electrical panels and receptacles are at their limit and they do not comply with NEC 2011. It is recommended to have the entire system upgraded to meet the current standards.

**EXTERIOR ENERGY RETROFIT**

The building is constructed of CMU with no insulation. The windows are original to the building, and of single pane construction. Buildings of this type are not energy efficient. This project recommends adding an EIFS over the CMU and replacing the windows with new dual-pane, safety glazed windows. This estimate includes removal and disposal of the existing windows. The estimate is based on $10.00 per square foot for the EIFS plus $1500.00 per window for 50 windows. This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**EXTERIOR FINISHES**

It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building excluding the roof. Included in the cost is painting the concrete masonry unit walls and caulking of the windows, flashing, fixtures and all other penetrations. Also included is repairing and painting the wood fascia as needed. It is recommended that the building be painted and caulked in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**INTERIOR FINISHES**

The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability. This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**PLUMBING VALVE REPLACEMENTS**

The majority of the plumbing isolation valves are gate valves that are original to the building. Most of these valves no longer completely stop water when closed. This project would provide for replacing the valves with new ball valves. This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

<td>The server room is not sufficiently cooled by the existing HVAC system. If the room is too warm, the computer equipment will prematurely age and may fail due to overheating. It is recommended to install an air conditioning system in the room to ensure that the temperature is properly regulated. This project would provide for the purchase and installation of an air conditioner including all required connections to existing utilities.</td>
<td></td>
</tr>
</tbody>
</table>
ELECTRICAL UPGRADE

This building was constructed before the high demand for electrical services were needed for security systems, computers and other electrical devices. As time has progressed, the buildings electrical demand and system has changed. The electrical panels and receptacles are at their limit. There are also problems with rusting conduits particularly underground conduits. As failures have happened, new conduits have been installed on the interior walls and some are not properly connected. It is recommended the entire system be upgraded to meet the evolving needs of the building and provide safe electrical distribution.

EXHAUST FAN REPLACEMENT

The existing exhaust fans that serve the bathrooms are original equipment and are not providing adequate ventilation. This project would provide for the removal of the existing exhaust fan assemblies and the purchase and installation of two new exhaust fan assemblies including connections to utilities.

EXTERIOR ENERGY RETROFIT

The building is constructed of CMU with no insulation. The windows are original to the building, and of single pane construction. Buildings of this type are not energy efficient. This project recommends adding an EIFS over the CMU and replacing the windows with new dual-pane, safety glazed windows. This estimate includes removal and disposal of the existing windows. The estimate is based on $10.00 per square foot for the EIFS plus $1500.00 per window for 20 windows.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

HVAC EQUIPMENT REPLACEMENT

The heat pump units and chiller piping are original to the building. They are located in the ceiling above the circular corridor. They have been problematic, have been leaking and have outdated R-22, which will be obsolete by January 1, 2020. The HVAC equipment should be scheduled for replacement within 2-3 years. This project would provide for the replacement of the equipment and cleaning of the existing duct work and grills. This project includes the removal and disposal of the existing equipment and all required connections to utilities.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

INTERIOR FINISHES

The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

NONABSORBENT FINISHES

2012 IBC Section 1210 requires the installation of smooth, hard, nonabsorbent surfaces in the following restroom areas: on floors in toilet and bathing rooms that extend upward onto the walls at least 6 inches, within 2 feet of the sides of urinals and water closets to a height of 4 feet above the floor and in shower compartments to a height not less than 70 inches above the drain inlet. This project recommends the installation of FRP or an equal material to comply with this code section.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.
SITE DRAINAGE UPGRADES

The grade does not slope away effectively from the buildings. Water has pooled against the foundation. In the winter months, as the water freezes against the foundation, over time, this can cause damage to the foundation. It is recommended per IBC 1804.3 Site Grading the ground immediately adjacent to the foundation shall be sloped away from the building at a slope of not less than one vertical in 20 units horizontal (5-percent slope) for a minimum distance of 10 feet (3048 mm) measured perpendicular to the face of the wall. This project would create a 5% slope away from the buildings. Additional drainage swales shall be installed, as needed. It is recommended that the grading be completed within 2-3 years.

WATER HEATER REPLACEMENT

There is an older booster water heater in the building that appears to be original to the structure. The average life span of a water heater is eight to ten years. With the passage of time and constant use, this unit is showing signs of wear and should be scheduled for replacement in the next 2-3 years. It is recommended that a new propane-fired water heater be installed. Removal and disposal of the existing equipment is included in this estimate. This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

PROJECT CONSTRUCTION COST TOTALS SUMMARY:

| Priority Class 1 | $29,500 | Project Construction Cost per Square Foot: $81.83 |
| Priority Class 2 | $271,100 | Total Facility Replacement Construction Cost: $1,172,000 |
| Priority Class 3 | $41,850 | Facility Replacement Cost per Square Foot: $280 |
| Grand Total: | $342,450 | FCNI: 29% |

Total Construction Cost for Priority 3 Projects: $41,850

Priorities:
- Priority Class 1: 29%
- Priority Class 2: 52%
- Priority Class 3: 19%

Long-Term Needs Four to Ten Years

EXTERIOR FINISHES

It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building excluding the roof. Included in the cost are painting the concrete masonry unit walls and caulking of the windows, flashing, fixtures and all other penetrations. It is recommended that the building be painted and caulked in the next 4-5 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure.
The CYC Lincoln Dormitory is a wood and concrete framed structure with uninsulated CMU walls, a single-ply membrane roofing system and sits on a concrete slab-on-grade foundation. It contains restrooms, sleeping areas, and a kitchenette for youths in a controlled environment. The facility has a fire alarm, sprinkler system and two roof mounted HVAC units.

PRIORITY CLASS 2 PROJECTS

Total Construction Cost for Priority 2 Projects: $124,340

Necessary - Not Yet Critical Two to Four Years

Project Index #: 0217ENR1
Construction Cost $75,920

EXTERIOR ENERGY RETROFIT

The building is constructed of CMU with no insulation. The windows are original to the building, and are of single pane construction. Buildings of this type are not energy efficient. This project recommends adding an EIFS over the CMU and replacing the windows with new dual-pane, safety glazed windows. This estimate includes removal and disposal of the existing windows. The estimate is based on $10.00 per square foot for the EIFS plus $1500.00 per window for 20 windows.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

Project Index #: 0217INT2
Construction Cost $45,920

INTERIOR FINISHES

The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability. This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

Project Index #: 0217PLM4
Construction Cost $2,500

WATER HEATER REPLACEMENT

There is a 50 gallon electric water heater in the building. The average lifespan of a water heater is eight to ten years. This unit was not installed correctly and was missing an element cover at the time of the survey. It is recommended that a new electric water heater, seismic straps, braided steel hoses, expansion tank, ball valve and a pan be installed. Removal and disposal of the existing equipment is included in this estimate.

### EXTERIOR DOOR REPLACEMENT

The existing exterior wood door appears to be original to the building. It is damaged from age and general wear and tear. This project would provide for the replacement of the wood door with a new metal door, frame, hardware and paint. Removal and disposal of the existing door and painting of the new door is included in this estimate. This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

### EXTERIOR ENERGY RETROFIT

The building is constructed of CMU with no insulation. The windows are original to the building, and of single pane construction. Buildings of this type are not energy efficient. This project recommends adding an EIFS over the CMU and replacing the windows with new dual-pane, safety glazed windows. This estimate includes removal and disposal of the existing windows. This estimate is based on $10.00 per square foot for the EIFS plus $1,500.00 per window for a total of 20 windows. This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

### INTERIOR FINishes

The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability. **Currently Critical**

**Immediate to Two Years**

**ADA RESTROOM UPGRADE**

The designated restroom does not meet the ADA requirements. A complete retrofit is necessary. This project would provide funding for construction of a new accessible restroom. These items may include a new sink, toilet, hardware, mirrors, fixtures, flooring and paint. The 2012 IBC, ICC/ANSI A117.1 - 2009, NRS 338.180 and the most current version of the ADA Standards for Accessible Design were used as references for this project.

*Project Index #: 0215ADA3*
*Construction Cost: $25,000*

**EXIT SIGN & EGRESS LIGHTING UPGRADE**

The emergency egress lighting is insufficient and the exit signs do not meet current standards. This project would provide for the purchase and installation of self-illuminated or LED style exit signs with battery-backed internal systems as well as emergency egress lighting to provide illumination along the egress route. IBC 2012 Chapter 10 was referenced for this project. This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

*Project Index #: 0215SFT2*
*Construction Cost: $4,185*

**EXTERIOR LANDING**

The exterior landing at the secondary exit door is in need of replacement due to the door swinging out over a 7" step. The 2012 IBC Chapter 10 requires a flat landing no more than 1/2 inch below finish floor where the door swings out over the landing. This project would provide for a new concrete landing to be installed. This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

*Project Index #: 0215SFT4*
*Construction Cost: $5,000*

**FIRE SUPPRESSION OBSTRUCTION INVESTIGATION**

The CYC Currie Dormitory is a wood and concrete framed structure with uninsulated CMU walls, a single-ply membrane roofing system and sits on a concrete slab-on-grade foundation. It contains restrooms, sleeping areas, and a kitchenette for youths in a controlled environment. The facility has a fire alarm, sprinkler system and two roof mounted HVAC units.

- **Project Index #: 0213ADA2**
- **Construction Cost: $25,000**

The designated restroom does not meet the ADA requirements. A complete retrofit is necessary. This project would provide funding for construction of a new accessible restroom. Items may include a new sink, toilet, hardware, mirrors, fixtures, flooring and paint. The 2012 IBC, ICC/ANSI A117.1 - 2009, NRS 338.180 and the most current version of the ADA Standards for Accessible Design were used as references for this project. This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

- **Project Index #: 0213ADA3**
- **Construction Cost: $1,500**

ADA regulations pertaining to building access has established building signage criteria for permanent spaces in buildings. The criteria includes: sign mounting heights and locations; character heights and proportions; raised and Braille characters/pictograms; and sign contrast and finish. The signage in this facility does not comply with these criteria. This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

- **Project Index #: 0213SFT6**
- **Construction Cost: $9,000**

This building has an automatic fire suppression system. Per NFPA 25 Obstruction Investigation and Prevention an inspection of piping and branch line conditions shall be conducted every 5 years by opening a flushing connection at the end of one main and by removing a sprinkler toward the end of one branch line for the purpose of inspecting for the presence of foreign organic and inorganic material. It is recommended that this project be completed within the next year and that this project be scheduled on a cyclical basis to maintain the integrity of the structure.

- **Project Index #: 0213ADA4**
- **Construction Cost: $15,000**

**KITCHEN REMODEL**

The kitchen and associated cabinets in the kitchen area are original to the building. The quality of construction and installation were inadequate for the high usage at this facility, and the cabinets and countertops are delaminating and failing. This project recommends the replacement of the existing kitchen countertops, cabinets, and associated equipment with heavy duty, quality components. The cabinets should be finished inside and outside with a melamine or similar finish which encapsulates the door, frame, and shelving. The countertops should be constructed of a highly durable product, such as stainless steel, over a moisture resistant underlayment to minimize swelling and damage from water exposure. ADA compliance according to NRS 338.180, IBC - 2012, ICC/ANSI A117.1 - 2009 and the most current version of the ADA Standards for Accessible Design should be incorporated into the design such as providing an accessible sink. This estimate includes removal and disposal of the existing materials.
### SPRINKLER PIPE ENCAPSULATION

The sprinkler piping is hung from the ceiling of the dormitory and is exposed to the occupants. This creates a safety hazard in two ways. One is that the occupants could damage the piping and cause flooding in the building. The other is that the occupants can tie things around the pipes and cause harm to themselves. This project recommends encapsulating the piping with wallboard and texturing and painting to match the adjacent ceiling finishes.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**Project Index #: 0213SFT4**  
**Construction Cost $3,000**

### CABINET REPLACEMENT

The sleeping rooms have a built-in desk, dresser and wardrobe closet for the students clothing and personal effects. They are constructed of chipboard and are of poor quality. Many are missing pulls and handles, have broken drawer faces and broken drawer slides. This project recommends replacing the existing units with heavy duty, institutional type desks and storage units constructed of metal or plywood with a washable surface. There are 18 built-in units and 2 portable units in the confinement rooms.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**Project Index #: 0213INT3**  
**Construction Cost $16,000**

### EXTERIOR DOOR REPLACEMENT

The exterior wood exit double doors are damaged from age and general wear and tear and have reached the end of their expected life. This project would provide for the replacement of the double door assembly with new metal doors, frames, hardware and paint. Removal and disposal of the existing doors is included in this estimate.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**Project Index #: 0213EXT5**  
**Construction Cost $5,000**

### EXTERIOR ENERGY RETROFIT

The building is constructed of CMU with no insulation. The windows are original to the building, and of single pane construction. Buildings of this type are not energy efficient. This project recommends adding an EIFS over the CMU and replacing the windows with new dual-pane, safety glazed windows. This estimate includes removal and disposal of the existing windows. The estimate is based on $10.00 per square foot for the EIFS plus $1500.00 per window for 20 windows.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**Project Index #: 0213ENR1**  
**Construction Cost $71,850**

### INTERIOR FINISHES

The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability. This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**Project Index #: 0213INT2**  
**Construction Cost $41,850**

### WATER HEATER REPLACEMENT

There is a 50 gallon electric water heater in the building. The average life span of a water heater is eight to ten years. With the passage of time and constant use, this unit is showing signs of wear and should be scheduled for replacement in the next 2-3 years. It is recommended that a new electric water heater be installed. Removal and disposal of the existing equipment is included in this estimate.

**Project Index #: 0213PLM4**  
**Construction Cost $2,500**

Long-Term Needs  
Four to Ten Years

EXTERIOR FINISHES

It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building excluding the roof. Included in the cost is painting the concrete masonry unit walls and caulking of the windows, flashing, fixtures and all other penetrations. It is recommended that the building be painted and caulked in the next 4-5 years and that this project is scheduled on a cyclical basis to maintain the integrity of the structure.

#### ADA RESTROOM UPGRADE

ADA regulations pertaining to building access has established building signage criteria for permanent spaces in buildings. The criteria includes: sign mounting heights and locations; character heights and proportions; raised and Braille characters/pictograms; and sign contrast and finish. The signage in this facility does not comply with these criteria. It is recommended that applicable signage be installed where required. NRS 338.180, IBC - 2012, ICC/ANSI A117.1 - 2009 and the most current version of the Americans with Disabilities Act Accessible Guidelines (ADAAG) were used as a reference for this project.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

#### ADA SIGNAGE

Americans with Disabilities Act (ADA) regulations pertaining to building access has established building signage criteria for permanent spaces in buildings. The criteria includes: sign mounting heights and locations; character heights and proportions; raised and Braille characters/pictograms; and sign contrast and finish. The signage in this facility does not comply with these criteria. It is recommended that applicable signage be installed where required. NRS 338.180, IBC - 2012, ICC/ANSI A117.1 - 2009 and the most current version of the Americans with Disabilities Act Accessible Guidelines (ADAAG) were used as a reference for this project.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

#### FIRE SUPPRESSION OBSTRUCTION INVESTIGATION

This building has an automatic fire suppression system. Per NFPA 25 Obstruction Investigation and Prevention an inspection of piping and branch line conditions shall be conducted every 5 years by opening a flushing connection at the end of one main and by removing a sprinkler toward the end of one branch line for the purpose of inspecting for the presence of foreign organic and inorganic material. It is recommended that this project be completed within the next year and that this project be scheduled on a cyclical basis to maintain the integrity of the structure.

Priority Class 2 Projects

Total Construction Cost for Priority 2 Projects: $137,200

Cabinet Replacement

The sleeping rooms have a built-in desk, dresser and wardrobe closet for the students clothing and personal effects. They are constructed of particle board and are of poor quality. Many are missing pulls and handles, have broken drawer faces and broken drawer slides. This project recommends replacing the existing units with heavy duty, institutional type desks and storage units constructed of metal or plywood with a washable surface. There are 18 built-in units and 2 portable units in the confinement rooms.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

Exterior Door Replacement

The exterior wood exit double doors are damaged from age and general wear and tear and have reached the end of their expected life. This project would provide for the replacement of the double door assembly with new metal doors, frames, hardware and paint. Removal and disposal of the existing doors is included in this estimate.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

Exterior Energy Retrofit

The building is constructed of CMU with no insulation. The windows are original to the building, and are of single pane construction. Buildings of this type are not energy efficient. This project recommends adding an EIFS over the CMU and replacing the windows with new dual-pane, safety glazed windows. This estimate includes removal and disposal of the existing windows. The estimate is based on $10.00 per square foot for the EIFS plus $1500.00 per window for 20 windows.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.
INTERIOR FINISHES

The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability. **ADA RESTROOM UPGRADE**
The designated restroom does not meet the ADA requirements. A complete retrofit is necessary. This project would provide funding for construction of a new accessible restroom. These items may include a new sink, toilet, hardware, mirrors, fixtures, flooring and paint. The 2012 IBC, ICC/ANSI A117.1 - 2009, NRS 338.180 and the most current version of the ADA Standards for Accessible Design were used as references for this project.

**EXIT SIGN & EGRESS LIGHTING UPGRADE**
The emergency egress lighting is insufficient and the exit signs do not meet current standards. This project would provide for the purchase and installation of self-illuminated or LED style exit signs with battery-backed internal systems as well as emergency egress lighting to provide illumination along the egress route. IBC - 2012 Chapter 10 was referenced for this project.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**EXTERIOR LANDING**
The exterior landing at the secondary exit door is in need of replacement due to the door swinging out over a 7” step. The 2012 IBC Chapter 10 requires a flat landing no more than 1/2 inch below finish floor where the door swings out over the landing. This project would provide for a new concrete landing to be installed.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**FIRE SUPPRESSION OBSTRUCTION INVESTIGATION**

**ADA ENTRY UPGRADES**

The ADA provides for accessibility to sites and services for people with physical limitations. At the threshold between the entrance door and the landing there is a large gap. The gap is large enough to compromise the compliance of the path of travel and should be altered. This project would provide for installing an extended threshold to cover the gap and bring the path of travel into compliance with the code. The 2012 IBC, ICC/ANSI A117.1 - 2009 and the most current version of the ADAAG were used as references for this project.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**ADA RESTROOM UPGRADE**

The men's and women's designated ADA restrooms do not meet the ADA requirements. A complete retrofit is necessary. This project would provide funding for construction of two unisex accessible restrooms. These items may include a new sink, toilet, hardware, mirrors, fixtures, flooring and paint. The 2012 IBC, ICC/ANSI A117.1 - 2009, NRS 338.180 and the most current version of the ADA Standards for Accessible Design were used as references for this project.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**ADA SIGNAGE**

ADA regulations pertaining to building access has established building signage criteria for permanent spaces in buildings. The criteria includes: sign mounting heights and locations; character heights and proportions; raised and Braille characters/pictograms; and sign contrast and finish. The signage in this facility does not comply with these criteria. It is recommended that applicable signage be installed where required. NRS 338.180, IBC - 2012, ICC/ANSI A117.1 - 2009 and the most current version of the ADAAG were used as references for this project.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

**DUAL LEVEL DRINKING FOUNTAIN INSTALLATION**

This building contains two water fountains that are not ADA compliant. The 2012 IBC Section 1109.5 states where drinking fountains are provided on an exterior site, on a floor or within a secured area, no fewer than two drinking fountains shall be provided. One shall comply with the requirements for people who use a wheelchair and one shall comply with the requirements for standing persons. This project would provide funding for the purchase and installation of two drinking fountains to meet the ADA requirements.
PRIORITY CLASS 2 PROJECTS

Two to Four Years

Total Construction Cost for Priority 2 Projects: $47,500

EXTERIOR FINISHES

It is important to maintain the finish, weather resistance and appearance of the building. This project would provide funding to protect the exterior of the building excluding the roof. Included in the cost is the caulking and sealing of the windows, flashing, fixtures and all other penetrations. It is recommended that the building be caulked and sealed in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

EXTERIOR LIGHTING REPLACEMENT

The building has perimeter lighting on the exterior of the building, but the light fixtures are old, failing and not energy efficient. This project would provide for the replacement of the exterior lighting fixtures with new LED light fixtures, using existing wiring.

INTERIOR FINISHES

The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next 2-3 years and that this project be scheduled on a cyclical basis to maintain the integrity of the structure. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability.

This project or a portion thereof was previously recommended in the FCA report dated 04/09/2002 and 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

WATER HEATER REPLACEMENT

There is a 15 gallon electric water heater in the building. The average life span of a water heater is eight to ten years. With the passage of time and constant use, this unit is showing signs of wear and should be scheduled for replacement in the next 2-3 years. It is recommended that a new electric water heater be installed. Removal and disposal of the existing equipment is included in this estimate.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

WINDOW REPLACEMENT

The windows are original, single pane construction in a metal frame. These older windows are drafty and not energy efficient. This project recommends replacing the windows with dual pane, higher efficiency units. This estimate is for the replacement of 5 units. Removal and disposal of the existing windows is included in this estimate.

This project or a portion thereof was previously recommended in the FCA report dated 09/21/2010. It has been amended accordingly to reflect conditions observed during the most recent survey date of 03/01/2017.

BUILDING INFORMATION:

Gross Area (square feet): 1,800
Year Constructed: 1994
Exterior Finish 1: 100 % Metal Siding
Exterior Finish 2: % IBC Construction Type: V-B
Number of Levels (Floors): 1 Basement? No

PROJECT CONSTRUCTION COST TOTALS SUMMARY:

Priority Class 1: $35,000 Project Construction Cost per Square Foot: $45.83
Priority Class 2: $47,500 Total Facility Replacement Construction Cost: $180,000
Priority Class 3: $0 Facility Replacement Cost per Square Foot: $100
Grand Total: $82,500 FCNI: 46%
NOTES:
The deficiencies outlined in this report were noted from a visual survey. The costs do not represent the cost of a complete facility renovation or maintenance needs. Recommended projects do not include telecommunications, furniture, window treatment, space change, program issues, relocation, swing space, or costs that could not be identified or determined from the survey and available building information.

Individual projects and costs noted herein may be impacted by new construction materials or methods, agency projects, and pending or proposed Capital Improvement Projects (CIP).

This report was created under the authority found in NRS 341.128 by the State Public Works Division and should be utilized as a planning level document.
