The Facility Condition Analysis Program was created under the authority found in NRS 341.201. The State Public Works Board develops this report using cost estimates based on contractor pricing which includes materials, labor, location factors and profit and overhead. The costs of project design, management, special testing and inspections, inflation and permitting fees are not included. Cost estimates are derived from the R.S. Means Cost Estimating Guide and from comparable construction costs of projects completed by SPWB project managers.

The deficiencies outlined in this report were noted from a visual survey. This report does not address routine maintenance needs. Recommended projects do not include telecommunications, furniture, window treatments, space change, program issues, or costs that could not be identified or determined from the survey and available building information. If there are buildings without projects listed, this indicates that only routine maintenance needs were found. This report considers probable facility needs for a 10 year planning cycle.

This report is not a guarantee of funding and should not be used for budgeting purposes. This report is a planning level document for agencies and State Public Works Board to assess the needs of the Building and/or Site and to help support future requests for ADA upgrades / renovations, Capital Improvement Projects and maintenance. The final scope and estimate of any budget request should be developed by a qualified individual. Actual project costs will vary from those proposed in this report when the final scope and budget are developed.

Establishing a Facility Condition Needs Index (FCNI) for each building

The FCA reports identify maintenance items and establish construction cost estimates. These costs are summarized at the end of the report and noted as construction costs per square foot. A FCNI is commonly used by facility managers to make a judgment whether to recommend whole replacement of facilities, rather than expending resources on major repairs and improvements. The FCNI is a ratio between the proposed facility upgrade costs and facility replacement costs (FRC). Those buildings with indices greater than .60 or 60% are recommended to be considered for complete replacement.

Class Definitions

PRIORITY CLASS 1 - Currently Critical (Immediate to Two Years)

Projects in this category require immediate action to return a facility to normal operation, stop accelerated deterioration, correct a fire/life safety hazard, or correct an ADA requirement.

PRIORITY CLASS 2 - Necessary - Not Yet Critical (Two to Four Years)

Projects in this category include conditions requiring appropriate attention to preclude predictable deterioration or potential downtime and the associated damage or higher costs if deferred further.

PRIORITY CLASS 3 - (Four to Ten Years)

Projects in this category include items that represent a sensible improvement to existing conditions. These items are not required for the most basic function of a facility; however, Priority 3 projects will either improve overall usability and/or reduce long-term maintenance.

The Dairy Farm is located adjacent to the Northern Nevada Correctional Center and behind the Stewart Conservation Camp, off Snyder Avenue in Carson City. The site encompasses approximately 1000 acres, and includes dairy and beef operations to support the Northern Nevada correctional facilities and conservation camps, as well as State and Federal wild horse programs. There is also irrigated fields which provide feed for the cattle. The irrigation water is treated effluent from Carson City. The access roads and circulation paths around the buildings and site are dirt. Fire protection on the site is minimal and a project will be recommended in the Facility Condition Analysis report. Most of the structures on the site are farm buildings, some of which date back to around 1916. These old structures are in poor condition.

**ELECTRICAL DISTRIBUTION SYSTEM UPGRADE**

The electrical service was adequate for the original buildings for the site. With additional buildings and anticipated needs, the service is approaching available capacity. This project recommends upgrading the system, providing separate services and disconnects for each of the buildings, replacing the switchgear and providing additional capacity for future growth.

This project or a portion thereof was previously recommended in the FCA report dated 09/02/2003. It has been amended accordingly to reflect conditions observed during the most recent survey date of 09/02/2008.

**WELL EVALUATION AND ABANDONMENT**

There are wells on this site that are no longer in use. The Division of Water Resources (DRW) requires that these wells be plugged as not to allow a conduit for ground water contamination.

The costs to plug the wells depend on the depth of the wells and the casing size. Preliminary estimates run around $45.00 per foot to plug the wells estimating that it around 200 feet deep. NAC 534.427 was referenced for this project.

Three wells with 8" casings were used to generate this estimate.

This project or a portion thereof was previously recommended in the FCA report dated 09/02/2003. It has been amended accordingly to reflect conditions observed during the most recent survey date of 09/02/2008.

**Exterior Finishes**

It is important to maintain the finish, weather resistance and appearance of the building. This project recommends work to protect the exterior building envelope, other than the roof, including painting, staining, sealing or other applied finishes, and caulking around windows, flashing, fixtures, and other penetrations to maintain the building in good, weather tight condition. It is recommended that this project be implemented in the next 2 to 3 years and is recommended on a cyclical basis based on environmental conditions.

**Interior Finishes**

The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next 4 to 5 years and every 5 to 7 years thereafter to maintain the integrity of the interior of the building. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability.

**Lighting Upgrade**

The existing lighting fixtures are the older fluorescent type, and are not energy efficient. This project will upgrade fixtures to T-8 lamps with electronic ballasts to current standards, resulting in increased efficiency and reduced costs associated with illumination. Any electrical wiring upgrades are not included in this estimate.

WILD HORSE ARENA
BUILDING REPORT

The Wild Horse Arena is an engineered steel building located adjacent to the wild horse corrals and office. The building has metal siding on two sides and is open for spectator viewing on the other two. The facility is in good shape.

**EXTERIOR FINISHES**

It is important to maintain the finish, weather resistance and appearance of the building. This project recommends work to protect the exterior building envelope, other than the roof, including painting, staining, sealing or other applied finishes, and caulking around windows, flashing, fixtures, and other penetrations to maintain the building in good, weather tight condition. It is recommended that this project be implemented in the next 2 to 3 years and is recommended on a cyclical basis based on environmental conditions.

**INTERIOR FINISHES**

The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next 4 to 5 years and every 5 to 7 years thereafter to maintain the integrity of the interior of the building. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability.

**LIGHTING UPGRADE**

The existing lighting fixtures are the older fluorescent type, and are not energy efficient. This project will upgrade fixtures to T-8 lamps with electronic ballasts to current standards, resulting in increased efficiency and reduced costs associated with illumination. Any electrical wiring upgrades are not included in this estimate.

- FCNI: 50%
The Maintenance Shop is an insulated engineered steel structure on a concrete slab-on-grade foundation. It contains a large shop area, a storage mezzanine with enclosed storage spaces below, and a non-ADA compliant restroom. The building has an evaporative cooler but does not have a heating system. The building is also lacking fire suppression and alarm systems. It is in good shape.

**PRIORITY CLASS 1 PROJECTS**

**Total Construction Cost for Priority 1 Projects:** $62,700

**Currently Critical**

**FIRE ALARM INSTALLATION**

This building is not equipped with an automatic fire detection and alarm system. It is recommended that an automatic fire detection and alarm system be installed. When completed, the new system will provide visual, as well as audible notification, in accordance with ADA requirements.

**Construction Cost**

- Project Index #: 2915SFT3
- $10,800

**FIRE SUPPRESSION SYSTEM INSTALLATION**

Pursuant to the Nevada State Fire Marshal Regulation, NAC 477.910 states, that every new building owned by the State that is intended for occupancy must be equipped with an automatic fire suppression system. This project would provide funding for the installation of an automatic fire suppression system and backflow prevention.

**Construction Cost**

- Project Index #: 2915SFT1
- $50,400

**INSTALL EXIT SIGNS AND EGRESS LIGHTING**

The building does not have any emergency lighting and the exit signs do not meet current standards. This project would provide for the purchase and installation of self-illuminated or LED style exit signs with battery-backed internal systems as well as emergency exit lighting to provide illumination along the egress route. IBC - 2006 Chapter 10 was referenced for this project.

**Construction Cost**

- Project Index #: 2915SFT2
- $1,500

**PRIORITY CLASS 3 PROJECTS**

**Total Construction Cost for Priority 3 Projects:** $14,400

**Long-Term Needs**

**EXTERIOR FINISHES**

It is important to maintain the finish, weather resistance and appearance of the building. This project recommends work to protect the exterior building envelope, other than the roof, including painting, staining, sealing or other applied finishes, and caulking around windows, flashing, fixtures, and other penetrations to maintain the building in good, weather tight condition. The Ranch House is an unreinforced sandstone masonry and wood framed structure with a wood shingle roof. Staff has been using the house for storage. There are many areas of the sandstone walls, wood framed decks and roof which are showing signs of structural failure. These items will be addressed in the Facility Condition Analysis report. The facility replacement cost (FRC) reflects a complete restoration of this structure.

**CONSERVE AND PROTECT BUILDING**

The building was constructed in 1916 out of unreinforced sandstone masonry. It is currently used for incidental storage and has been vandalized. The broken windows in the buildings have allowed pigeons, bats and other pests access to the building, with related health hazards and permitted rain to enter the building. The second floor is unusable due to instability of the floor/ceiling assembly.

In order to preserve the building for future rehabilitation and reuse, this project recommends mothballing it in accordance with the U. S. Department of Interior Recommended Guidelines in Preservation Brief 31. Costs related to providing drainage away from the buildings to prevent future water accumulation, pest control and removal of accumulated waste are included. Windows and doors will be secured or covered, and some will include louvers to permit ventilation of the structure. Roofing is addressed in a separate project.

**STRUCTURAL ASSESSMENT**

The building was constructed in 1916 out of unreinforced masonry. The walls are showing signs of failure including cracking, settling and crumbling. This project would provide for an investigation and assessment to be done by a licensed Structural Engineer to identify possible deficiencies and problems in the building and provide a report outlining issues and resolutions. Future projects may result from this report and are not included in this estimate. This project should coincide with the preservation project.

**EXTERIOR FINISHES**

It is important to maintain the finish, weather resistance and appearance of the building. This project recommends work to protect the exterior building envelope, other than the roof, including painting, staining, sealing or other applied finishes, and caulking around windows, flashing, fixtures, and other penetrations to maintain the building in good, weather tight condition. It is recommended that this project be implemented in the next 2 to 3 years and is recommended on a cyclical basis based on environmental conditions.

**ROOF REPLACEMENT**

The wood shingle roof on this building was in poor condition at the time of the survey. It is recommended that this building be re-roofed in the next two to three years with a new 50 year asphalt composition roofing shingle and new underlayments. This estimate includes removal and disposal of the old roofing.
BUILDING INFORMATION:

Gross Area (square feet):  3,000
Year Constructed:  1916
Exterior Finish 1:  100 %  Sandstone Masonry
Exterior Finish 2:  
Number of Levels (Floors):  2  Basement?  No
IBC Occupancy Type 1:  100 %  R-3

DAIRY BARN
BUILDING REPORT

The Dairy Barn is a concrete masonry structure with a single-ply membrane roof on a concrete slab-on-grade foundation. It contains a dairy cow milking area, processing area and testing lab, a clean room, walk-in cooler, a restroom which was in the middle of a remodel during the 2008 survey, a small office, loading dock, mechanical room and storage areas. There is a gas fired water tube steam boiler, chiller plates and an air cooled condensing unit outside for milk processing operations and HVAC. There is an evaporative cooler mounted on the exterior of the building for cooling and a gas fired ceiling mounted heating unit which for the office and milking area. The air handler located inside was non-operational during the survey of 2008. It has manual pull stations for the audible fire alarm system. The facility is in good condition considering it's age.

PRIORITY CLASS 1 PROJECTS

Currently Critical

Total Construction Cost for Priority 1 Projects: $7,998

FIRE ALARM INSTALLATION

This building is not equipped with an automatic fire detection and alarm system. It is recommended that an automatic fire detection and alarm system be installed. When completed, the new system will provide visual, as well as audible notification, in accordance with ADA requirements.

Project Index #: 1443SFT1
Construction Cost $7,998

PRIORITY CLASS 2 PROJECTS

Necessary - Not Yet Critical

Total Construction Cost for Priority 2 Projects: $126,378

CEILING SYSTEM UPGRADE - PROCESSING ROOM

The processing room in this building has a suspended acoustical tile ceiling system. The t-bar framing is bent and rusted in many areas and a number of the ceiling tiles are damaged and stained. This project would provide for the replacement of the suspended acoustical tile ceiling system. Removal and disposal of the existing ceiling system is included in this estimate.

Project Index #: 1443INT2
Construction Cost $10,500

CONCRETE APRON REPLACEMENT

The exterior concrete apron outside of the processing room has extensive cracking and is due for replacement. This project would provide for the installation of a new 120 square foot 4" thick concrete slab-on-grade apron. Removal and disposal of the existing concrete is included in this estimate.

Project Index #: 1443EXT5
Construction Cost $1,200

EVAPORATIVE COOLER REPLACEMENT

There are 2 existing wall mounted evaporative coolers that service this building. The units are not energy efficient and are approaching the end of their expected life. This project would provide for the removal of the existing coolers and replacement with one central roof top evaporative cooling unit including connections to utilities and existing duct work.

Project Index #: 1443HVA1
Construction Cost $6,000

EXTERIOR FINISHES

It is important to maintain the finish, weather resistance and appearance of the building. This project recommends work to protect the exterior building envelope, other than the roof, including painting, staining, sealing or other applied finishes, and caulking around windows, flashing, fixtures, and other penetrations to maintain the building in good, weather tight condition. It is recommended that this project be implemented in the next 2 to 3 years and is recommended on a cyclical basis based on environmental conditions.

Project Index #: 1443EXT1
Construction Cost $26,660
FLOORING REPLACEMENT - LAB

The VCT (vinyl composite tile) flooring in the lab room is damaged and reaching the end of its useful life. It is recommended that the VCT flooring be replaced. This project would provide for removal and disposal of the existing VCT and installation of new 12x12 VCT with a 6" base.

**Project Index #: 1443INT3**  
**Construction Cost $2,700**

INTERIOR FINISHES

The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next two to three years and every 5 to 7 years thereafter to maintain the integrity of the interior of the building. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability.

**Project Index #: 1443INT1**  
**Construction Cost $13,330**

LIGHTING UPGRADE

The existing lighting fixtures are the older fluorescent type, and are not energy efficient. This project will upgrade fixtures to T-8 lamps with electronic ballasts to current standards, resulting in increased efficiency and reduced costs associated with illumination. Any electrical wiring upgrades are not included in this estimate.

**Project Index #: 1443ENR1**  
**Construction Cost $7,998**

ROOF REPLACEMENT

The single-ply roof on this building was in poor condition at the time of the survey. It is recommended that this building be re-roofed in the next two to three years with a new single-ply roofing system. The small pop-outs around the building are covered by asphalt composition roofing shingles. These areas should be replaced as well. This estimate includes removal and disposal of the old roofing.

**Project Index #: 1443EXT2**  
**Construction Cost $39,990**

WINDOW REPLACEMENT

The windows are original, single pane construction in a metal frame. These older windows are drafty and not energy efficient. This project recommends replacing the windows with dual pane, higher efficiency units. This estimate is for the replacement of 18 units.

**Project Index #: 1443EXT3**  
**Construction Cost $18,000**

PRIORITY CLASS 3 PROJECTS

**Total Construction Cost for Priority 3 Projects: $22,500**

Long-Term Needs  
Four to Ten Years

EXTERIOR DOOR REPLACEMENT

The building has 3 exterior metal doors and 6 exterior wood doors that have reached the end of their expected life. They are damaged from age and general wear and tear. This project would provide for the replacement and installation of 9 new metal doors, frames and hardware. Removal and disposal of the existing doors and painting of the new doors is included in this estimate.

**Project Index #: 1443EXT4**  
**Construction Cost $22,500**
### BUILDING INFORMATION:

BREAK ROOM

BUILDING REPORT

The Break Room is an insulated wood framed structure on a concrete slab-on-grade with a corrugated metal roof. It used to be known as the Carpenter Shop and Chukar Club. The building is used primarily as a break room and includes a small storage area. It is lacking heating and cooling systems and also contains the electrical panels for the main electric pole feed to the lower half of the dairy farm. The building is in fair shape.

### PRIORITY CLASS 2 PROJECTS

**Total Construction Cost for Priority 2 Projects:** $4,536

**Necessary - Not Yet Critical**

**Two to Four Years**

- **EXTERIOR FINISHES**
  - It is important to maintain the finish, weather resistance and appearance of the building. This project recommends work to protect the exterior building envelope, other than the roof, including painting, staining, sealing or other applied finishes, and caulking around windows, flashing, fixtures, and other penetrations to maintain the building in good, weather tight condition. It is recommended that this project be implemented in the next 2 to 3 years and is recommended on a cyclical basis based on environmental conditions.
  
  **Construction Cost:** $840

- **INTERIOR FINISHES**
  - The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next two to three years and every 5 to 7 years thereafter to maintain the integrity of the interior of the building. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability.

The Pump House is a small steel framed structure on a concrete slab-on-grade with a flat metal roof. The pumping equipment is no longer in use. The building is primarily used to house the electrical switchgear for the lower half of the dairy farm. It is uninsulated and has no heating or cooling systems. The building is in poor shape.

**Priority Class 2 Projects**

- **EXTERIOR DOOR REPLACEMENT**
  - Project Index #: 0288EXT2
  - Construction Cost: $750
  - The existing exterior metal door appears to be original to the building. It is damaged from age and general wear and tear. This project would provide for the replacement and installation of one new metal door, frame and hardware. Removal and disposal of the existing door and painting of the new door is included in this estimate.

- **EXTERIOR FINISHES**
  - Project Index #: 0288EXT1
  - Construction Cost: $360
  - It is important to maintain the finish, weather resistance and appearance of the building. This project recommends work to protect the exterior building envelope, including painting, staining, sealing or other applied finishes, and caulking around windows, flashing, fixtures, and other penetrations to maintain the building in good, weather tight condition. This building including the roof is in poor shape and should be weather sealed and caulked to prevent further damage. It is recommended that this project be done within the next two years.

**Building Information:**

- Gross Area (square feet): 120

- Facility Replacement Cost per Square Foot: $25
- FCNI: 37%
NOTES:
The deficiencies outlined in this report were noted from a visual survey. The costs do not represent the cost of a complete facility renovation or maintenance needs. Recommended projects do not include telecommunications, furniture, window treatment, space change, program issues, relocation, swing space, or costs that could not be identified or determined from the survey and available building information.

Individual projects and costs noted herein may be impacted by new construction materials or methods, agency projects, and pending or proposed Capital Improvement Projects (CIP).

This report was created under the authority found in NRS 341.201 by the State Public Works Board and should be utilized as a planning level document.

REPORT DEVELOPMENT:
