STEWART CONSERVATION CAMP
1721 East Snyder Street
Carson City, Nevada 89702

Site Number: 9984
STATE OF NEVADA PUBLIC WORKS BOARD
FACILITY CONDITION ANALYSIS

Report Printed in June 2008
The Facility Condition Analysis Program was created under the authority found in NRS 341.201. The State Public Works Board develops this report using cost estimates based on contractor pricing which includes materials, labor, location factors and profit and overhead. The costs of project design, management, special testing and inspections, inflation and permitting fees are not included. Cost estimates are derived from the R.S. Means Cost Estimating Guide and from comparable construction costs of projects completed by SPWB project managers.

The deficiencies outlined in this report were noted from a visual survey. This report does not address routine maintenance needs. Recommended projects do not include telecommunications, furniture, window treatments, space change, program issues, or costs that could not be identified or determined from the survey and available building information. If there are buildings without projects listed, this indicates that only routine maintenance needs were found. This report considers probable facility needs for a 10 year planning cycle.

This report is not a guarantee of funding and should not be used for budgeting purposes. This report is a planning level document for agencies and State Public Works Board to assess the needs of the Building and/or Site and to help support future requests for Capital Improvement Projects and maintenance. The final scope and estimate of any budget request should be developed by a qualified individual. Actual project costs will vary from those proposed in this report when the final scope and budget are developed.

Establishing a Facility Condition Needs Index (FCNI) for each building

The FCA reports identify maintenance items and establish construction cost estimates. These costs are summarized at the end of the report and noted as construction costs per square foot. A FCNI is commonly used by facility managers to make a judgment whether to recommend whole replacement of facilities, rather than expending resources on major repairs and improvements. The FCNI is a ratio between the proposed facility upgrade costs and facility replacement costs (FRC). Those buildings with indices greater than .60 or 60% are recommended to be considered for complete replacement.

Class Definitions

**PRIORITY CLASS 1** - Currently Critical (Immediate to Two Years)

Projects in this category require immediate action to return a facility to normal operation, stop accelerated deterioration, correct a fire/life safety hazard, or correct an ADA requirement.

**PRIORITY CLASS 2** - Necessary - Not Yet Critical (Two to Four Years)

Projects in this category include conditions requiring appropriate attention to preclude predictable deterioration or potential downtime and the associated damage or higher costs if deferred further.

**PRIORITY CLASS 3** - (Four to Ten Years)

Projects in this category include items that represent a sensible improvement to existing conditions. These items are not required for the most basic function of a facility; however, Priority 3 projects will either improve overall usability and/or reduce long-term maintenance.

STEWART CONSERVATION CAMP
BUILDING REPORT

This site houses the Stewart Conservation Camp. The property is located between the Northern Nevada Correctional Center and the Prison Farm.
There are 10 structures on the site including 5 housing units, a shared multi-purpose building, a culinary and dining facility, and 2 NDF buildings which support camp operations. There is ample parking and the site is in good shape.

PRIORITY CLASS 1 PROJECTS

Currently Critical  Immediate to Two Years

Total Construction Cost for Priority 1 Projects:  $242,000

FIRE ALARM INSPECTION

The fire alarm system was not operating at the time of the survey. The reason for the malfunction was not known at the time of the survey and the maintenance staff explained that there is no funding to repair the system. This project would provide funding for an inspection of the system by a certified fire alarm equipment inspector to determine the cause of the problem. Any future projects would come from report recommendations.

FIRE SPRINKLER SUPPLY LINE REPLACEMENT

The main fire sprinkler supply line servicing the campus has rusted and is due for replacement. Staff reported that they recently replaced a portion of the buried piping and visual inspection revealed that the entire line is beginning to fail. This project would provide funds to remove the existing piping and replace it with a new line. The estimate includes disposal of the existing materials, excavation, backfill, etc.. Backflow prevention replacement is included in this estimate.

UPDATE WATER TREATMENT SYSTEM

The chemical water treatment and water softener systems throughout the camp are in good condition, but some were not operating and others did not receive regular maintenance. This project would provide for a chemical treatment program including an updated chemicals control system, service and employee training provided by a qualified water treatment vendor. The annual maintenance fee charged by the water treatment vendor would be determined after an investigation of the water system is complete. These annual costs are not included in this project cost. For budgeting purposes, a $15,000 fee is suggested.

PRIORITY CLASS 2 PROJECTS

Necessary - Not Yet Critical  Two to Four Years

Total Construction Cost for Priority 2 Projects:  $98,000

LANDSCAPE IMPROVEMENTS

A large portion of the site is not covered by vegetation or rock and is a constant maintenance problem. The wind and water causes the dirt to erode which then must be replaced once a year in order to maintain the grade and protect the buildings. This project recommends covering the dirt areas with grass including an irrigation system. Another alternative could include planting of shrubs as a wind break. Xeriscaping may be another method but due to security concerns, having cobblestone or other objects in the landscaping may pose a risk to inmates and staff.
SLURRY SEAL ASPHALT PAVING

It is important to maintain the asphalt concrete paving on the site. This project would provide for minor crack filling and slurry sealing of the paving site wide including access roads and parking areas. Striping is included in this estimate. This project should be scheduled on a 5 year cyclical basis to maintain the integrity of the paving and prevent premature failure. 80,000 square feet of asphalt area was used to generate this estimate.

This project or a portion thereof was previously recommended in the FCA report dated 8/22/2003. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2008.

PRIORIT Y CLASS 2 PROJECTS

EXTERIOR FINISHES

It is important to maintain the finish, weather resistance and appearance of the building. This project recommends work to protect the exterior building envelope, other than the roof, including painting, staining, or other applied finishes, and caulking around flashing, fixtures, and other penetrations to maintain the building in good, weather tight condition. It is recommended that this project be implemented in the next 2 to 3 years and is recommended on a cyclical basis based on environmental conditions.

BUILDING INFORMATION:

Year Constructed: 2000
Exterior Finish 1: 100 % Wood
Exterior Finish 2: 0 %
Number of Levels (Floors): 0 Basement? No
IBC Occupancy Type 1: 0 %
IBC Occupancy Type 2: 0 %
Construction Type: V-B
Percent Fire Suppressed: 0 %

PROJECT CONSTRUCTION COST TOTALS SUMMARY:

Priority Class 1: $0 Project Construction Cost per Square Foot: $2.00
Priority Class 2: $340 Total Facility Replacement Construction Cost: #Error
Priority Class 3: $0 Facility Replacement Cost per Square Foot: #Error
Grand Total: $340 FCNI: #Error
HOUSING UNIT 05
BUILDING REPORT

Housing Unit 5 is a 48 bed dormitory style housing unit. It is a concrete masonry unit and wood framed structure with a composition roof and concrete foundation. There are restrooms, showers, janitor's closet and a mechanical room which contains an 85 gallon water heater, 2 natural gas fired boilers, a water softener and ancillary equipment. Cooling is provide by 3 roof mounted evaporative coolers. The building is in fair shape. The building is not ADA complaint and will be addressed in the report.

PRIORITY CLASS 2 PROJECTS

Total Construction Cost for Priority 2 Projects: $334,300

Necessary - Not Yet Critical	Two to Four Years

INTERIOR FINISHES

The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next two to three years and every 5 to 7 years thereafter to maintain the integrity of the interior of the building. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability.

Project Index #: 2015INT4
Construction Cost $19,600

REMOVE WATER FOUNTAIN

This building has a water fountain which is not ADA accessible, damaged and is very rarely used. This project recommends permanently removing the water fountain.

Project Index #: 2015ADA1
Construction Cost $500

REPLACE ROOF

The asphalt composition shingle roof on this building was in fair condition at the time of the survey. The extreme temperature fluctuations throughout the year, consistent wind which blows sand and dirt on to the roof, and constant exposure to the sun are contributing factors to wear and deterioration. It is recommended that this building be re-roofed in the next two to four years with a 50 year asphalt composition roofing shingle and new underlayments. This project or a portion thereof was previously recommended in the FCA report dated 8/22/2003. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2008.

Project Index #: 2015EXT1
Construction Cost $39,200

REPLACE ROOF

The asphalt composition shingle roof on this building was in fair condition at the time of the survey. The extreme temperature fluctuations throughout the year, consistent wind which blows sand and dirt on to the roof, and constant exposure to the sun are contributing factors to wear and deterioration. It is recommended that this building be re-roofed in the next two to four years with a 50 year asphalt composition roofing shingle and new underlayments. This project or a portion thereof was previously recommended in the FCA report dated 8/22/2003. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2008.

Project Index #: 2015ADA2
Construction Cost $275,000

RESTROOM REMODEL

The restroom and shower room are in overall poor condition. The countertops in each room show signs of wear and deterioration. Extensive use, combined with repetitive water being spilled, has caused the laminate top to separate from the wooden underlayment and should be replaced. The tile on the floors and walls of the bathrooms are damaged and worn and should be replaced. This project provides for a complete remodel of the restroom and shower room which should include an ADA compliant toilet stall, shower and sink with all ADA complaint fixtures. The existing exhaust fans are undersized and should be replaced with commercial grade exhaust fans. The removal and disposal of the old fixtures and finishes is included in this estimate.

This project or a portion thereof was previously recommended in the FCA report dated 8/22/2003. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2008.
PRIORITY CLASS 3 PROJECTS

Total Construction Cost for Priority 3 Projects: $51,200

Long-Term Needs Four to Ten Years

EVAPORATIVE COOLER REPLACEMENT

Project Index #: 2015HVA1
Construction Cost $12,000

This building is cooled by three roof mounted evaporative coolers. This equipment will reach the end of its expected life in the next 5 to 6 years and should be scheduled for replacement in that time frame. The estimate includes removal and disposal of the existing equipment.

EXTERIOR FINISHES

Project Index #: 2015EXT2
Construction Cost $39,200

It is important to maintain the finish, weather resistance and appearance of the building. This project recommends work to protect the exterior building envelope, other than the roof, including painting, staining, or other applied finishes, and caulking around windows, flashing, fixtures, and other penetrations to maintain the building in good, weather tight condition. It is recommended that this project be implemented in the next 4 to 5 years and is recommended on a cyclical basis based on environmental conditions.

BUILDING INFORMATION:

- Gross Area (square feet): 3,920
- Year Constructed: 1994
- Exterior Finish 1: 90% Concrete Masonry U
- Exterior Finish 2: 10% Painted Wood Siding
- Number of Levels (Floors): 1
- Basement?: No
- IBC Occupancy Type 1: 100% I-3
- IBC Occupancy Type 2:

HOUSING UNIT 03
BUILDING REPORT

Housing Unit 3 is a 48 bed dormitory style housing unit. It is a concrete masonry unit and wood framed structure with a composition roof and concrete foundation. There are restrooms, showers, janitor's closet and a mechanical room which contains an 85 gallon water heater, 2 natural gas fired boilers, a water softener and ancillary equipment. Cooling is provide by 3 roof mounted evaporative coolers. According to staff, this unit is an ADA compliant unit but during the survey of 2008, there were some ADA compliant components missing which will be addressed in the report. The building is in fair shape.

| Priority Class 3: | $51,200 | Facility Replacement Cost per Square Foot: $300 |
| Grand Total: | $385,000 | FCNI: 33% |
Housing Unit 1 is a 48 bed dormitory style housing unit. It is a concrete masonry unit and wood framed structure with a composition roof and concrete foundation. There are restrooms, showers, janitor's closet and a mechanical room which contains an 85 gallon water heater, 2 natural gas fired boilers, a water softener and ancillary equipment. Cooling is provide by 3 roof mounted evaporative coolers. The building is in fair shape. The building is not ADA complaint and will be addressed in the report.

### PRIORITY CLASS 2 PROJECTS

**Total Construction Cost for Priority 2 Projects:** $333,800

**Necessary - Not Yet Critical**  
Two to Four Years

- **INTERIOR FINISHES**
  - The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next two to three years and every 5 to 7 years thereafter to maintain the integrity of the interior of the building. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability.

- **REPLACE ROOF**
  - The asphalt composition shingle roof on this building was in poor condition at the time of the survey. The extreme temperature fluctuations throughout the year, consistent wind which blows sand and dirt on to the roof, and constant exposure to the sun are contributing factors to wear and deterioration. It is recommended that this building be re-roofed in the next two to four years with a 50 year asphalt composition roofing shingle and new underlayments. This project or a portion thereof was previously recommended in the FCA report dated 8/22/2003. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2008.

- **RESTROOM REMODEL**
  - The restroom and shower room are in overall poor condition. The countertops in each room show signs of wear and deterioration. Extensive use, combined with repetitive water being spilled, has caused the laminate top to separate from the wooden underlayment and should be replaced. The tile on the floors and walls of the bathrooms are damaged and worn and should be replaced. This project provides for a complete remodel of the restroom and shower room which should include an ADA compliant toilet stall, shower and sink with all ADA complaint fixtures. The existing exhaust fans are undersized and should be replaced with commercial grade exhaust fans. The removal and disposal of the old fixtures and finishes is included in this estimate. This project or a portion thereof was previously recommended in the FCA report dated 8/22/2003. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2008.

### PRIORITY CLASS 3 PROJECTS

**Total Construction Cost for Priority 3 Projects:** $51,200

**Long-Term Needs**  
Four to Ten Years

- **EVAPORATIVE COOLER REPLACEMENT**
  - This building is cooled by three roof mounted evaporative coolers. This equipment will reach the end of its expected life in the next 5 to 6 years and should be scheduled for replacement in that time frame. The estimate includes removal and disposal of the existing equipment.
EXTERIOR FINISHES

It is important to maintain the finish, weather resistance and appearance of the building. This project recommends work to protect the exterior building envelope, other than the roof, including painting, staining, or other applied finishes, and caulking around windows, flashing, fixtures, and other penetrations to maintain the building in good, weather tight condition. It is recommended that this project be implemented in the next 4 to 5 years and is recommended on a cyclical basis based on environmental conditions.

BUILDING INFORMATION:

CULINARY / DINING
BUILDING REPORT

The Culinary / Dining facility is a concrete masonry unit and wood framed structure with a composition roof and concrete foundation. It has a commercial style kitchen, food preparation and storage areas and a large dining room for inmates housed at the camp. There are 2 roof mounted heating units and make-up air and exhaust fans for the cooking equipment. Cooling is provided by a condensing unit mounted along the south side exterior of the building. The building is not ADA complaint and will be addressed in the report.

ADA RESTROOM UPGRADE
The restroom does not meet the Americans with Disabilities Act (ADA) regulations. A retrofit is necessary to comply with 2006 IBC Chapter 11, ICC/ANSI A117.1-1998 Sections 603 - 604 and the Americans with Disabilities Act Accessibility Guidelines (ADAAG). Given the current configuration of the restroom, the work will include the installation of a new toilet, sink, grab bars, faucets, mirrors, dispensers and hardware. Some minor design work will be required and may impact the final cost estimate. This estimate is for one unisex restroom facility. The removal and disposal of the old restroom fixtures is included in this estimate.

HVAC SYSTEM REPLACEMENT
The building is heated by two roof-top furnaces and cooled by one air conditioner on grade. One of the heating units has been decommissioned in order to provide parts for the other unit. In turn, the ducting has been re-routed to accommodate for the loss of one unit. This equipment is original to the building and has reached the end of its expected life. This project recommends replacing the roof-top heaters, the air conditioning condenser unit and routing the ductwork back to the original design. The estimate includes removal and disposal of the existing equipment.

MISCELLANEOUS ELECTRICAL REPAIRS
The electrical subpanel has some broken circuit breaker safety caps and is not properly labeled. There is an electrical cord from the walk-in coolers ran through the wall into a damaged duplex outlet located in the dry storage room. This project would provide the repairs necessary to bring these items into compliance with codes and adopted standards.

INTERIOR FINISHES
The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next two to three years and every 5 to 7 years thereafter to maintain the integrity of the interior of the building. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability.

Project Index: 2010INT1
Construction Cost: $18,750
KITCHEN EQUIPMENT UPGRADE

The kitchen cooking equipment is original to the building and is reaching the end of its lifetime. It is recommended that the equipment be scheduled for replacement in the next two to three years, including the Baxter oven, refrigerator and freezer equipment and the Mars Air Door unit on the back door. This project provides for the removal and disposal of the existing equipment and replacement with new equipment. This estimate is a lump sum for budgeting purposes.

REPLACE ROOF

The asphalt composition shingle roof on this building was in poor condition at the time of the survey. The extreme temperature fluctuations throughout the year, consistent wind which blows sand and dirt on to the roof, and constant exposure to the sun are contributing factors to wear and deterioration. It is recommended that this building be re-roofed in the next two to four years with a 50 year asphalt composition roofing shingle and new underlayments. This project or a portion thereof was previously recommended in the FCA report dated 8/22/2003. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2008.

REPLACE VINYL COMPOSITION TILE

The existing vinyl composition tile (VCT) in the dining, corridors and storage areas is extremely worn, damaged and should be replaced. This project would provide for the removal and replacement of the VCT.

SUSPENDED ACOUSTICAL CEILING TILE REPLACEMENT

The Dining space in this building has a suspended acoustical ceiling tile system. The system is original to the building and has reached the end of its expected life. The metal frame is bent and rusted in many areas and a number of the ceiling tiles are damaged and stained. This project recommends replacing the suspended acoustical ceiling tile system including the tiles. Removal and disposal of the existing ceiling system is included in this estimate.

PRIORITY CLASS 3 PROJECTS

Total Construction Cost for Priority 3 Projects: $37,500

Long-Term Needs Four to Ten Years

EXTERIOR FINISHES

It is important to maintain the finish, weather resistance and appearance of the building. This project recommends work to protect the exterior building envelope, other than the roof, including painting, staining, or other applied finishes, and caulking around windows, flashing, fixtures, and other penetrations to maintain the building in good, weather tight condition. It is recommended that this project be implemented in the next 4 to 5 years and is recommended on a cyclical basis based on environmental conditions.

| Grand Total     | $375,650 | FCNI: 31% |
The Control Room facility is a concrete masonry unit and wood framed structure with a composition roof and concrete foundation. It contains administrative offices, a unisex restroom and reception / security control area. This building serves as the "center" for security operations for the camp.

The building is not ADA complaint and the fire alarm master control box was not operational at the time of the 2008 survey. Projects will address these items in the report.

PRIORITY CLASS 2 PROJECTS

**Total Construction Cost for Priority 2 Projects:** $28,125

**Necessary - Not Yet Critical**

**Two to Four Years**

**INTERIOR FINISHES**

The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next two to three years and every 5 to 7 years thereafter to maintain the integrity of the interior of the building. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability.

**REPLACE ROOF**

The asphalt composition shingle roof on this building was in poor condition at the time of the survey. The extreme temperature fluctuations throughout the year, consistent wind which blows sand and dirt on to the roof, and constant exposure to the sun are contributing factors to wear and deterioration. It is recommended that this building be re-roofed in the next two to four years with a 50 year asphalt composition roofing shingle and new underlayments.

This project or a portion thereof was previously recommended in the FCA report dated 8/22/2003. It has been amended accordingly to reflect conditions observed during the most recent survey date of 04/29/2008.

**PRIORITY CLASS 3 PROJECTS**

**Total Construction Cost for Priority 3 Projects:** $22,750

**Long-Term Needs**

**Four to Ten Years**

**EVAPORATIVE COOLER REPLACEMENT**

This building is cooled by an evaporative cooler located on grade on the south side of the building. This unit will reach the end of its expected life in the next 8 to 10 years and should be scheduled for replacement in that time frame. The estimate includes removal and disposal of the existing equipment.

**EXTERIOR FINISHES**

It is important to maintain the finish, weather resistance and appearance of the building. This project recommends work to protect the exterior building envelope, other than the roof, including painting, staining, or other applied finishes, and caulking around windows, flashing, fixtures, and other penetrations to maintain the building in good, weather tight condition. It is recommended that this project be implemented in the next 4 to 5 years and is recommended on a cyclical basis based on environmental conditions.

MULTI-USE BUILDING

BUILDING REPORT

The Multi-Use building is a concrete masonry unit and steel framed structure with a metal roof and concrete foundation. It contains a large gymnasium, restrooms, laundry room inmate store and a storage area on the second floor. This building is shared with the Nevada Division of Forestry and is separated by a demising wall. The building is in good shape.

**PRIORITY CLASS 1 PROJECTS**

**Total Construction Cost for Priority 1 Projects:** $1,200

Currently Critical

Immediate to Two Years

**REPLACE STAIR HANDRAILS**

Project Index #: 2008SFT1

Construction Cost: $1,200

There is a set of stairs which lead to an upper level storage area in the NDF portion of the building. The existing wood framed handrails at the stairs do not meet the requirements of the 2006 IBC. This project would provide for the installation of handrails in accordance with the 2006 IBC Chapter 10, Section 1012.

**PRIORITY CLASS 2 PROJECTS**

**Total Construction Cost for Priority 2 Projects:** $35,000

Necessary - Not Yet Critical

Two to Four Years

**INTERIOR FINISHES**

Project Index #: 2008INT3

Construction Cost: $35,000

The interior finishes are in fair condition. It is recommended that the interior walls and ceilings be painted at least once in the next two to three years and every 5 to 7 years thereafter to maintain the integrity of the interior of the building. Prior to painting, all surfaces should be repaired and prepped. An epoxy-based paint should be utilized in wet areas for durability.

FCNI: 7%
This building serves as the office for Forestry operations at the Stewart Conservation Camp. It houses offices, a muster room and equipment storage. It is a concrete masonry unit and wood framed structure with a composition shingle roof. At the time of the 2008 survey, staff indicated that the fire alarm system was completely inoperable due to a lightening strike. This affects all of the buildings at Stewart Conservation Camp. The maintenance of this building is under the jurisdiction of the Department of Corrections.

NOTES:

The deficiencies outlined in this report were noted from a visual survey. The costs do not represent the cost of a complete facility renovation or maintenance needs. Recommended projects do not include telecommunications, furniture, window treatment, space change, program issues, relocation, swing space, or costs that could not be identified or determined from the survey and available building.

Individual projects and costs noted herein may be impacted by new construction materials or methods, agency projects, and pending or proposed Capital Improvement Projects (CIP).

This report was created under the authority found in NRS 341.201 by the State Public Works Board and should be utilized as a planning level document.
